

Dear [REDACTED]

June 26, 2002

I hope things are going well. Enclosed, please find your marked up drawing, including the corrections. I have paid very close attention to detail, and tried to follow everything that you wrote down. [REDACTED] you mentioned that the cockpit/fuselage section started at the center of the disc, and tapered back all of the way to the trailing edge of the disc. I have included this version, in addition to one that stops short of the trailing edge. I know we must be getting close now. Please mark up any changes. There should be very minor corrections left after this final pass. [REDACTED] when you are satisfied with the drawings, and you feel that I have got it right, would you please sign my drawings indicating your certification. I will create a small space for your signature at the bottom, but only AFTER you are 100% satisfied that the drawings are correct.

Thanks
