

Tulsa Oklahoma UFO sighting

On the night of October 3, 1976 (9:00 PM) five eyewitnesses observed an unusual UFO hovering over Tulsa Oklahoma (I44 and Harvard). The object was described as being sixty feet in diameter, with a dome that rose to a total height of eight feet. The outside rim appeared to rotate in a counter-clockwise direction. The exterior of the craft had rectangular shaped windows through which a bright white light could be seen. Two steady lights (one red and one white) were located on the upper surface of the craft. After approximately ten minutes, the interior white lights went out, and the craft was observed to disappear behind a group of buildings. Source: CUFOs archives (Illustration by .
