

[REDACTED]

[REDACTED]

Dear Admiral [REDACTED]

Congratulations and my best wishes on your move to the Pentagon and to the Joint Staff Intelligence Directorate. I am sure that your significant challenges there in the next few years will continue to be supported by an excellent staff. And of course you can always "MINX" them back there at USACOM!

As both of us were busy prior to your departure from Norfolk, I regret that we could talk only briefly on recent significant worldwide developments, at the highest levels of government, related to Extraterrestrial Intelligence (ETI) and Unidentified Flying Objects (UFOs). The enclosed information is provided as background reading for you and appropriate staff to give you a "heads-up" on the subject prior to any questions and/or taskings from the White House.

Additionally, I would like to offer you the opportunity for a personal briefing, at a mutually convenient time and place, by Dr. Steven M. Greer, M.D., International Director of the Center for the Study of Extraterrestrial Intelligence (CSETI), Asheville, North Carolina. Since the topic is sensitive with DoD, the briefing could be informal and off-the-record, if you desire. It would include an overview of CSETI's mission and recent breakthroughs, international developments and trends in the field, synopsis of recent briefings to senior White House Staff, the DCI, and foreign Heads of State, and would include potential impacts of projected events on DoD missions.

For the past three years I have had the privilege of working with Dr. Greer on CSETI research and education projects and have served as ad-hoc advisor in military liaison matters. CSETI has emerged in this controversial field as the most respected and professional international organization of its kind whose membership includes personnel from DoD intelligence communities, current & former NASA astronauts, Congressmen, and senior civilian leaders.

Recent CSETI field work now commands the attention of senior government and industry officials, as well as the White House. CSETI initiatives were briefed in 1993 to Wright-Patterson AFB Foreign Aerospace Science & Technology Center (FASTC). Results of this briefing reached the White House which has expressed interest in CSETI's work including their "Project STARLIGHT", associated "Best Available Evidence", and public education and international press conference initiatives.

I anticipate that advisors on the Joint Staff , USACOM, and other DoD activities will ultimately have a significant role to play in mitigating public concern for and reactions to events related to this topic. Since there is considerable confusion and disinformation on the subject, it may be helpful for JS intelligence personnel and contingency planners to be aware of worldwide trends, recent significant events, projected activity, and planned initiatives in the international civilian community.

You may reach me at DSN: [REDACTED] until 31 December, or at home at [REDACTED]. Dr. Greer may be reached in Ashville, NC directly at: [REDACTED].

Please give my best to RADM [REDACTED] next time you talk with him and feel free to share any of the enclosed information with him and his staff.

I'll make a point of calling you prior to my next trip to D.C. , hopefully before I leave USACOM 31 December 1994 and return to "CIVLANT". I trust you had a great Thanksgiving and will have a "most excellent" Yule!

Very respectfully,
