RE: [REDACTED] and the Philadelphia Experiment

Found this in a funky little self-published (Xeroxed) book by an 80 year old GE engineer who is working the minor league MUFON circuit.

Am going to post it in the Website Members Section. There is more in the book.

Tony

Excerpt

SUMMARY/DISCUSSION: In one author's (Bob's) experience, the Philadelphia Story did happen during WW2 but was related to the battle of sonar under water just off our coast. It was not related to the battle of radar over the skies of Europe as told in the movie THE PHILADELPHIA STORY. Also the boat involved was the minesweeper IX97, not the USS Destroyer Eldridge as in the 1984 science fiction version of the event.

Just as early in the war we were losing the radar war over Europe, we were losing the sonar battle against German mines and submarines off our shores.

Could we get troops to England in time? We did!

Would the atomic bomb be finished in time? We used it!

Was the war of radar and sonar won in time for us to win the war without needing the two atomic bombs? How will we ever know?

In the actual Philadelphia Experiment the minesweeper IX97 was moved in time from a position in the Philadelphia harbor outside the Navy shipyard to a position at dock in Newport News CT where the IX97 had been two weeks previously. As the experimental power was raised nothing happened until suddenly, wham! It happened and sailors died as a result.

Author Col. Philip J. Corso has confirmed The Experiment from work he did with [REDACTED] while Chairman and chief policy maker of President Eisenhower's National Security Administration. Corso tells me (Bob Beckwith) of Burke's knowledge of the experiment and his deep concern and regret over the

loss of life that resulted. Corso tells me that my recall of the event has greater detail than any source that he knows of. He tells me that the project continued and has progressed greatly since then. Col. Corso has kindly given permission to use his name to this important confirmation of my 55 year old memory.

The Experiment used and confirmed the principle of Chapter 13: Divided Space. As a result we now know that once the threshold of divided space is crossed, levitation, teleportation and time travel all become possible.

The ability of gifted humans to levitate, teleport and travel in time can now be supported, duplicated and studied in university Biology and Psychology laboratories. Concurrently the barrier to low energy levitation, teleportation and time travel can be crossed in Engineering and Physics laboratories. Results from studies with humans and studies with machinery can then be compared in recognition of the same underlying principle: Divided Space!

Excerpted from: "Hypotheses"

by [REDACTED] and [REDACTED]

Bob Beckwith is an 80 year old ex-General Electric Electrical Engineer who was also manager of the computer section of their Electronics Lab in Syracuse for 6 years. He holds 5 patents establishing the principles of frequency shift keying (FSK), and several other patents.
