Subject: Re: Witness Paul La Violette

Linda: I sent his address and phone number in with my report to Steve as shown below. He also has my Preston Nichols report.

See ya soon, Ted

Witness Archive Project

Notes from a phone calls on July 19(930-1040), July 20, and July 24, 2000 (by Ted Loder
Compiled on July 21 and July 27, 2000.

Dr. Paul LaViolette
[REDACTED]
[REDACTED]
[REDACTED]

A short version of his resume is available at: [REDACTED]

After playing telephone tag for several days we finally connected on the 19th and spoke again on the 20th. After I introduced the project and myself, and he said that he had met Dr. Greer at the Energy conf. near Washington last year, we talked. Mostly I listened. He immediately stated that relative to the subject of antigravity, he had only worked in that area from a theoretical physics point of view and had no experience in black projects. He said that he had written a number of papers on the subject of subquantum kinetics.

He then spent a while telling me about his many books such as "Beyond the Big Bang" (on connections with ancient science, early constellation lore may have been taught by ETs); "Earth under Fire" (the role of cosmic ray bombardment); and his most recent book "Talk of the Galaxy" (in which he develops the ideas that pulsars are ET beacons). He is concerned about the possibility of major cosmic ray bombardment of earth and thinks that Ets may have knowledge we could use to save the earth. He has founded the Starburst Foundation to look at galactic core as a source of the cosmic rays and to develop shield technologies to protect the Earth from such ray bursts. He has done ice core work using isotopes of Be, for example, to determine cosmic ray bursts which he found show cycles of every 26,000 years and perhaps 13,000 years. We could be due for a new one sometime in the relatively near future (next 1000 years?).

He spoke about the use of microwave phase conjugation technology to create forces at a distance such as might used for crop circles. He later mentioned the use of the same technology to produce anti-gravity by projecting beams of phase conjugated microwaves. He said that he had tried to work on the T. Brown experiments and repeat them, but "was not successful." However, he said that Larry Deavenport (806-359-4278 -Nevada?) was much more successful and got things to fly around (no mention of size). He also mentioned that T. Brown got too close to antigrav techniques the Navy was working on and Rickover told him to get away from it (Brown was an outsider).

He stated that his B-2 paper was "speculative." He was annoyed that it had been copied many times and posted on the web etc. I have an official copy if you want one.

Other semi-random comments from my notes:

Hughes Aircraft has a major electrogravitics program ongoing. He said that he sent them his resume hoping to get a job there (consulting?) but heard nothing.

President Carter was threatened when he asked about UFOs.

An institute in Montana (Montana Energy Institute?) is doing unconventional energy work.

A Commander Gates mentioned to him that a 3-Star general was very interested in the B-2 Bomber anti-grav. Issue.

When asked about other names he knew in the energy areas he mentioned:

Scott Chubb at the Naval Research Lab in MD (202-767-5270), who has a background in new energy sources, attended the IRI(?) Conf. (the one Steve Spoke at).

Dave Hamilton at the Dept. of Energy (202-586-7409), interested in transportation issues, excited about nuclear battery technology, heavy element work.

The Patent Office:

He is involved with others (Tom Valone for one), I believe, in litigation with the patent office over the issue that ideas are protected rights. He said that the Patent Office is lobbied by the American Physical Society and by a Dr.(?) Parks (who is a bully and represents a group of people with very narrow scientific views - almost a religion). I asked him where their money comes from and perhaps they represented someone else. He didn't seem to think that was the case, but that they were just narrow minded. This group and the Patent Office were involved in preventing "Black Light" from going forward as described in the Village Voice article (Dec. 99 at villagevoice.com/issues/9951/baard.shtml). I have not checked this out yet.

He mentioned that Senator Ron Widen (liberal Dem. From OR), was a supporter of "Black Light" and familiar with the Patent Office issue.

Finally we talked about what he might present at the Senate preliminary meeting, which he said that he was willing to help out with. He said he could speak to the theory of anti-gravity, Brown's work (Tesla's as well), the new ideas in physics frameworks used to interpret new ideas. Such as the 1st law of thermodynamics is broken all the time, red shift may be tired light, new ideas of faster and slower than the speed of light findings. To say that energy is perfectly conservative is nothing more than a religion, no real basis to this statement.

Early on after he stated that he had no involvement with Black projects, he asked about the security oath issues. I briefed him on the CSETI view of oaths and the UNOD issue.

On July 24, 2000 I called him again to give him Will's phone number in case he wished to pursue the security oath issue further. He stated that he was having second thoughts about the interview - not sure yet. I suggested that he check with Will if he wished, read the information on DNP on the website, and get back to us.

Summary: He has a very wide knowledge of a lot of very pertinent issues. The fact that he has "cold feet" suggests this. He could be a great witness on the scientific background, but may not be willing to talk about other things at this point. I think he will be willing to participate in the initial Senate hearing meeting even if he changes his mind regarding the DNP interview.

Recommendation: I recommend that when Steve gets back, he call Paul and perhaps Paul will fall to Steve's charms and it will push him over the edge and he will do the interview. I can not predict how it will go at this point. I think he has the potential for being an excellent witness. Sorry to not get his firm ok. I thought I had it.
