Very interesting! I am aware of the warning
And events are imminent. Would be interested to know specifically how we could simulate the pulsar
signals and at what cost and logistics. Thanks!

Dear Steven,

You likely remember me, you had videotaped me in Arlington/Alexandria in Spring of 1999 as part of the Disclosure Project. I had testified on the Electrogravitics Systems report that I had obtained from Wright Patterson, also explained TT Brown's findings in light of the subquantum kinetics paradigm, and talked about how his technology was incorporated into the B2 bomber propulsion system. I recently viewed your CE5 documentary which I found very fascinating and well done.

I am contacting you because I feel I have some pieces of the puzzle that could further advance the CE5 contacts. Beginning around 1979 while working on my PhD degree at Portland State, I discovered the existence of a Galaxy wide pulsar beacon network. I had concluded 1) that pulsars are artificial beacons some beams being targeted toward us other beams to other locations throughout the Galaxy, 2) that they were likely fabricated by a Galaxy wide civilization due to their widespread dispersal through the Galaxy, 3) that ET's likely use them for navigation as a kind of Galactic GPS system (I suggested this use of pulsars long before NASA), 4) they are sending to Earth (specifically) a coded message warning us of the passage of the last major Galactic superwave about 14,000 to 16,000 years ago. Superwaves are cosmic ray outbursts emitted from our Galaxy's core that can have a substantial impact on our planet, even cataclysmic in some cases. My PhD thesis was involved in researching the superwave phenomenon, a hypothesis that was partly inspired from this pulsar message.

In 1984 I had formed the Starburst Foundation whose purpose was to carry out further research on the superwave phenomenon and to warn governments and the public about the possibility of a future hazard of this sort. My research indicated that superwaves/Galactic core outbursts are a recurrent phenomenon and based on the dates of past events registered in the polar ice record, I determined that we are currently overdue for the next event.

In a CE5 encounter it is of great importance that we let ET's know that we are aware of the superwave phenomenon and of the message that the "Galactic Federation", creators of the pulsar network, have sent us. Starburst has had as one of its future projects the staging of a CE5 event with three beacons that would flash at frequencies identical with certain pulsars in this message. This would let the ETs know that we have deciphered their message and likely know about the superwave phenomenon. This communication may stand a better chance of working with ETs from our own Galaxy.

Much of my work on pulsars and their artificial nature can be found in the following books and videos:

<https://etheric.com/product/decoding-message-of-the-pulsars/>

<https://etheric.com/product/the-talk-of-the-galaxy-dvd-video/>

Also this paper summarizes some of the main points.

Let me know if you would be interested in collaborating on this?

Best regards,
