

~~Mr. [redacted]~~

11-28-91

~~[redacted]~~

~~Dear [redacted]~~

Sorry I could not make the Los Vegas meeting but my trip to N.C. could not be changed. However he promised me writing a white paper of verification of the UFO incidents as promised. Since it is Thanksgiving and the house is full of family & friends a quick note is in order. This letter will verify that the entire UFO story as printed on the front page of the Oct. 12, 1982 is true and factual as was the Uto cover up story on page 87 of the Jan 1985 issue of Omni Magazine.

Recollections of the "closed door" session prior to calling in Lt. Jacobs to review the "incident". I do remember the two agents briefing our two top civ. scientists and myself that for the records this was "a normal launch" with "malfunction" (?) minutes after takeoff. The Chief Scientist answered in the affirmative as I remember "I understand". The three of us were then briefed as to the seriousness of any breach of security on this incident. I was ask who from the photo. squadron may have reviewed the film. I assured them Lt. Jacobs worked with me to assure I received "edited" launch film for command review within hours after a completed operation. So I did not request his commander be called in, and I don't know if he ever was. There was mention of not including this incident on "blue papers" which I do not understand at the time but which I now feel he meant "the blue book" of UFO incidents. Discussions of other incidents and projects were discussed between the other four in the room but I was busy filling out their papers for release and security of the film. The reason for our classification of the film, I remember was left blank for them to fill in. I only signed for the film when I first received it. This did not sign out for all the footage but took out that part that showed the encounter and

One project we worked on was to develop a photo-readable computer system capable of impressing and reading of one billion bits of information on a square inch of film. We accomplished this by developing a super-clean, room environment, with super-normal film and a developing system to match. Once we were successful our next step was to "cube it". Which we also did. This was in 1965 & 66. Now the lid is coming off of this program and I read about research & development into super-computing using photo systems. Can you imagine what has been accomplished in space-space programs that we know nothing about.

On the photo. All I have is old material in uniform. Bob Jacobs has B&W photos of the crew who were on site the day of the accident including yourself. This would be the best material to use.

Best Wishes to you & yours
over the Holidays
JFK

Humble P. My eldest son was quality control officer on the Space Shuttle, as Mission Specialist. He came to you with Lockheed and is now in Lockheed's Space Systems Division. I would not discuss this with him. He also has a lot of material about what you did.

[redacted] from R. J. [redacted] dtd 11-26-77

of the film to me as a "complete" package. The one agent stated as he handed me back the film - "That leaves you off the hook but not off any disclosure - - Goodenough? Naturally my answer was "yes sir".

Let Jacob went through the same routine when he arrived, when he reviewed the film and when he departed.

There has been so much developing in the realm of life, time and space since that time. And I have been fortunate enough to have been a part of so many unbelievable projects that to this day I believe we are getting help from someone or something "out there".

As I discussed with you on the phone many of our world recognized scientists are developing theory leading to the probability of a 4th dimension. The most recent in article in a current Newsweek magazine on a "double strand theory". This is so strange because in the P.D. News the greatest of scientific updated information in the July 18th 1977 release page 33 I did an introduction for a friend Tom Barker on his article "Time and Space and the Double Helix" (Copy enclosed). It may make a nice introduction to your group. Or a sentence or two as a key-note to one of your or Bob's presentations.

I must get back to this Holiday Celebration. Please forgive the pencil and tablet but it was within reach, away from the people all over the house and in deep office. But to make it all legal will sign it in ink before I mail it tomorrow.

[redacted]

1-30-1983

Dear [redacted]:

The Enquirer story is true except the year was 1964 not 1965. The camera system we used was capable of "nuts and bolts" focus from a point seventy miles from any object being tracked so the photos were readable. I was not then nor am I now able to relate any "conclusions" or "facts" that were captured on film. However I do have some deep concerns about information, so vital now to the future of mankind, falling into the wrong hands at the wrong time. A case in point; We had the "secret" information on "the Bomb" and the future of mankind was protected, up to now, of its further use by U.S. Also the fallout development of super weapons have been accomplished by U.S. And the answer to our successes has been more and bigger bombs built from our secrets which fell into the wrong hands because someone else found and released our secrets to those who have no concern over the future of mankind, only of their own. Haunting their development of gas as a weapon of war is also proof of their love of others. See, what I am getting at is that from all of my projects and research I have come across many instances where small groups of selected persons are working on items for advances from and published data, yet can be imagined

1
further fallout ^{we can see} of their research.* Consider if this
set scientific community did not believe, in
all data you have so expertly put together, why would
they'd up so many packages from Vandenberg and the
Capto try to establish communication? ⁽²⁾ Your research
shows only too well we have received communication,
but yet have not enjoyed the two way communication
we are attempting. It will come soon.

You sent me an outline, or biographical summary
on yourself and your security status since 1956, and it is
impressive. As you can see Barry Goldwater, for whom
I have the highest respect, stated in your att #F, that he
was "understandably denied" his request at Wright Patterson;
And certainly his credentials and security status are higher than either
you or I have --- except for specific projects --- I know you
understand. Research & development has been my life and it's hard
to find a field of technology I have not touched, but if I passed on my
classified information, even within these technologies, it was with
authority or permission and assurance it was being done
to better mankind not destroy it. I am unique in being a
survivor of four wars, WW², Korea, ^{the} Cold War, and 3 1/2 years in
Vietnam and as a scientist I want to see no more human
waste and destruction.

Can you see why this country would be selected for communication from other worlds? Can you see why some ones are kept secret to prevent further dissemination of mankind? And can you see what would happen if the information "discovered" fell into the wrong hands and was used against, not for mankind? We the U.S. have had such secrets in our hands and have proven our dedication to preservation. That's why you have uncovered so much information from U.S. but not all.

I would like you to touch base with two people. ^{#1} One a writer like yourself, doing work for Omni and others. You might like to compose notes on a one for one basis. The other ^{#2} a specialized technician like yourself, who I call "The Levels Advocate" will bend your ear about me, his theories on UFO's and 4th dimension prohibitions and where and when we may gain the knowledge God intended to give us to fill up the void we have never used of our brain. ^{#1} Exi [redacted] Home or ^{#2} [redacted] office & ^{#1} Tom Barber, (also a sci-fi writer) 5015 W. Augusta Circle, Glendale Arizona 85308.

Lee: keep me posted on your progress I can do two things one let you know if you are getting worse, and ^{to} Verbs whatever I can. Sincerely, H. H. Housman, D.

MANSMANN RANCH

March 8 1983

Dear [redacted]:

Your letter relates your background and interest in the sciences most involved in UFO research. I wish I could be more helpful to persons like you and Lee and his group. Our meeting was exciting in exchanges of information and very pleasant. However how much information was gathered to determine the exact items being held by those with a need to know, and their or the identity thereof, or was meager. My "defiant" was complete so gave them whatever information I could. Mr Bob, opened a pandora's box and in the next few months I have ^{been} bombarded with phone calls and letters. I try to answer the sincere ones.

First the Enquirer ^{story} was true except the date was '964. I was in Vietnam in '65. Telescopic photography of that magnitude makes sizes undeterminable, we knew the missile size but could not compare since we did not know how far from the missile the "object" was at time of beam release. Maneuverability was also at question for the same reason. Propulsion was ~~plasma~~ like but not probable. In such gravity ^{plasma induced} speed and maneuverability would

in the film,
the assumption was, at that time extraterrestrial.
Details would be sketchy and from memory, the shape was
classic disc, the center seemed to be a raised bubble,
not sure any ports or slits could be seen but was
stationary, or moving slightly - floating - over the entire
lower source shape which was glowing and "seemed"
to be rotating, ^{slowly} at the point of beam release - if it was
a beam, it, the object, turned like an object required
to be in a position to fire from a platform --- but again
this could be my own assumption from being in actual
contact. Assumptions are easy where unknowns are involved.
There is one thing going on which may bring more to
light soon. Howard University is into computer scanning
for extraterrestrial signals from worldwide information
gathered from great amounts of data, good scientific data.

Wish I could be of more help. Maybe sometime
you will be in Fresno and can stop by. I go to Stanford U.
periodically so call first.

Best of luck on your research
