Hello [REDACTED]

Thanks for thinking of me. It is certainly very interesting information. I have been looking into "Superfluids" like the helium we kept stored at South Pole Station at almost zero degrees Kelvin. We seemed to have lots of it and I am wondering why. Maybe Steven has some thoughts and may wish to discuss on air again. Just a thought. These Neutrinos are going to become more common in conversations.

Have a great day,
[REDACTED]

Hello [REDACTED]

This email came to the website and Steve thought you might find it interesting.

Best

Good day!! Wishing you all a very Merry Christmas and Happy New Year and most of

all regards to you all for continuing to bring the truth to the masses.

You may have received information from me in the past, my name is Scott Rauvers and I am the acclaimed scientist at ez3dbiz.com. I have dedicated my science to enriching and empowering my readers. However something very interesting occurred to me after watching the video titled: = = = Find out about the astonishing classified technologies at the South Pole ===== which I saw on Dr. Steven Greer's Youtube Channel.

The video talks about the world's largest Neutrino Detector at the south pole (The IceCube Neutrino Observatory). A whistleblower in the video stated that this facility may also have a dual purpose; being used for sinister purposes. I had just finished watching the new James Bond Movie No Time to Die (5 thumbs up) when it occurred to me that the cylindrical tubes of light that were underground in a chamber of water kind of resembled the neutrino detector array at the south pole, which is buried approximately 2 miles down into the ice. These detectors give off flashes of light whenever a neutrino interacts with the pure ice.

So, now let's get down to the good stuff.

Neutrinos go through EVERYTHING. A neutrino can easily pass through 1000 light-years of lead without any form of resistance whatsoever (Neutrino-based communication is a first. Physics World. IOP Publishing. 19 Mar 2012).

However, like every bit of matter in our Universe, they have mass; although very tiny. To prove neutrinos have mass Nobel Prize Physics recipients, Takaaki Kajita and Arthur B. McDonald used liquid-filled underground tanks with rock above them to filter out cosmic rays that bombard Earth in order to observe small chargeless neutrinos at Japan's Super-Kamiokande and Canada's Sudbury Neutrino Observatory (SNO)

It has been scientifically proven that you can use this small amount of mass contained within the neutrino to generate electricity

Professor Günther Krause,. Patent # WO2016142056A1

<https://neutrino-energy.com/patent-wo2016142056a1/>

Neutrinos can also be programmed to send messages -

<https://www.newscientist.com/article/mg21328574-900-neutrinos-send-wireless-message-through-the-earth/>

Because neutrinos have no electrical charge, they are unaffected by magnetic fields, allowing them to travel in straight lines, even directly through earth.Because there is no interference. This means a line-of-sight type targeting beam, even aimed directly into the earth so the neutrinos go through the earth and into the target would be very effective, making agricultural crops very vulnerable. Not to mention a neutrino EMP, would also take out anything with a silicon chip. If indeed research into portable neutrino generators is taking place, it would cause massive damage to crops and city infrastructure alike.

A super-powered neutrino generator could in theory be used to instantly destroy nuclear weapons anywhere on the planet, according to a team of Japanese scientists. If it was ever built, a state could use the device to obliterate the nuclear arsenal of its enemy by firing a beam of neutrinos straight through the Earth.

Anyway, because neutrinos go through EVERYTHING, it means they are also going through your DNA at this very moment. Our sun makes approximately 61,000,000,000 neutrinos per second at 1 square centimeter per cross section on Earth. The Human body presents an area to the sun of 10,000 square centimeters. Hence, 610 trillion neutrinos are passing right through your body in the second it takes to read this line. This is what allows neutrinos to pass through light years of lead without impediment.

Since the COVID-19 pandemic began, a worldwide database of every citizen's DNA is being compiled right at this very moment; because in each COVID-19 test, human DNA can also be recorded. So we are now dealing with the infinitely tiny. DNA & Neutrinos are very tiny; almost at the subatomic level. What if you were able to piggy back information onto a cloud of neutrinos and that information contained specific instructions to affect a person's DNA?. As that programmed cloud of neutrinos began passing through that person, a targeted population or even crops, it would begin re-writing the DNA in such a way they got "mysteriously ill" or perhaps made them crazy or maybe even healed them.

In order to do this you would need to affect the neutrinos in such a way that as they passed through the device, they became "programmed" then continued on passing on. Next they would need to be aimed at the location the target resided.

Polyethylene Glycol

This is used in the COVID-19 vaccine

<https://onlinelibrary.wiley.com/doi/10.1111/cea.13874>

It has also been used to trap neutrinos

<https://cen.acs.org/articles/93/i43/Chemistry-Helping-Physicists-Detect-Neutrinos.html>

I find it very interesting that the recent James Bond film occurred around the same time the pandemic was in full swing and that the plot involves a bio-weapon that can be tuned to a person's specific DNA. Not only that, young crops are extremely vulnerable to DNA manipulation. Hence if this weapon is real, it could be used to remotely wipe out entire crops, or worse yet, re-program the genetic sequences of a crop so that eating the food may also target specific individuals.

Summary

Will the forthcoming worldwide DNA database be used as new Remote DNA Targeting Bioweapon?

A horrible, horrible weapon if this ever was to go online. As I stated at the start of this e-mail, I have devoted my life of scientific discoveries to empower the people through information and hopefully this e-mail will continue to serve such a purpose.

PS: I state in my thesis

http://www.ez3dbiz.com/neutrinos_faster_than_light_intuitive_communication.html

that neutrinos are the key to receiving information through time. It is also very likely the latest submarines already are experimenting with neutrino based communication systems. However there may also be research occurring at the Neutrino Detector at

the South Pole in regards to sending messages through time. I mean, hey if you already have all the toys (your own anti-gravity fleet, UFO scalar wave targeting systems etc.) why not start experimenting with time?

Stay well, stay safe and most of all STAY INFORMED.
