Subject: South Pole Station

Hello Mr. Greer,

Thank you for responding. I am not much for typing so I will be brief. The IceCube Neutrino Detector at the South Pole Station is NOT just a detector. Additionally the E.L.F. that is supposedly OFF is ON.

I have already produced documentation about what the DOM's can also do. But I am a little person in an ocean of liars and I am sinking.

[DOM Document – Deciphering My Experience](#)

There are 5160 DOM's in the Ice. 2 miles deep covering a massive zone at the Pole. It is a powerful phased array besides detecting. I am sure you can imagine the possibilities. I am working on narrowing down to some more precision.

I hope you can help me get beyond the Hoax!!!(John recommended I watch your video. Good stuff)

Thank you.
