

RESUME OF INVESTIGATIVE STUDY OF UNIDENTIFIED
CREATURE PROVIDED [REDACTED]

This creature, also known as [REDACTED] and the Employee, was found by [REDACTED] in the middle part of the U.S.A. a few years ago(? January 1992), in the woods. He brought this creature to me for examination and to assist in a study of it in an attempt to identify it. This study began in Jan. 1997.

The following events of study are as follows:

Bellwood Gen. Hospital, Radiology Department - multiple X-rays using conventional techniques(Dr. [REDACTED])

Bellwood Gen. Hospital - Pathology Dept,(Dr. [REDACTED])

Alliance Imaging at Bellwood Gen. Hospital - Computer Aided Tomography

[REDACTED], D.D.S. - special dental and skeletal x-rays taken in Newport Beach, CA, using special Sony equipment

San Bernardino County Museum, Paleontologist [REDACTED]

Geo-science Research Institute, Loma Linda University - review and consultation regarding anatomical aspects of creature

Washington State University, College of Veterinary Medicine, [REDACTED], DVM, PhD, Professor of Anatomy - general review of creature

[REDACTED], Paleontology and Primate Anthropology - general review of creature. (Located in Castaic, CA)

[REDACTED] of Kansas City, Kansas - regarding details of location and finding of certain specimens, and of laboratory work performed

Subj: Hello From Fort Smith...
To: [REDACTED]

Long time no hear from...many changes since we last talked. [REDACTED] and I were married April the 25th....still on a honey moon.. [REDACTED] my 14 year old boy went to spend the summer with [REDACTED] two kids in San Diego..and with her parents. [REDACTED] does not want to come back to Arkansas now...he wants to stay in California..wonder why?

A close friend of mine had a conversation with an older man who was out fishing one day around the same time that I found [REDACTED]. He was in Waldron, AR which is south of Fort Smith. While he was fishing ...he saw this thing swimming in the water towards the shore. It came up to the shore ...crawled out of the water and stood up... According to the older man...it was exactly like what we think [REDACTED] is...it had short arms like what we think [REDACTED] had. He was so scared that he dropped everything and ran off. He left all his extremely expensive fishing gear by the water and refused to go get it. His family asked him what happened and he refused for years to even talk about that day. His family eventually went out there to pick up his gear as he wouldn't. The reason why he never said anything to anyone was that he thought people would think him crazy...he heard thru various sources about me and what I found...that was when he decided to contact my close friend [REDACTED] and tell him about his experience and what he saw. He never told a soul about it until now. He said it really scared him. He said the creature after it stood up on the bank of the river, that it ran off into the woods on it's two legs.

So what is going on with [REDACTED]?

How are you two doing and your family? We hope all is well with you and yours.

Write back as soon as you can...

Sincerely,

Your friends..

14 December 96 - conversation with [REDACTED]

The nodules within, or upon the ribs, and which are in the "mid-axillary line", according to human anatomical terms, assuming the view in the photo depicts the side, or lateral, view of the skeleton, the front being positioned 90° to the right and ^{counter}clockwise. D. says that every other rib from the base of the skull down to the bottom of the back bone has a fin, 4 inches in length. I noted that these nodules, or rounded areas were on every rib, and D. said maybe the fins were attached to each rib nodule. (Perhaps D. first statement regarding the fins being on every other rib is correct?)

The bottom of the skeleton is curved and D. says that is because the skeleton had been put in a 10 gallon container filled with preservative at the Univ. of Oklahoma. However, this skeleton had been kept with ^{out} any preservation means and in the open air by [REDACTED], the finder of the skeleton, for about 6 months. It was found by [REDACTED] approximately 4 weeks after it had been killed. There was no evidence of decay of the flesh(?), or covering when it was found, or when it was taken to the Univ. of Oklahoma about 6 months later. Sitting in the container resulted in the curvature of the lower part of the skeleton. D. says the skeleton can be straightened without any problem. D. says the height of the skeleton is about 5' in height, in erect, or up position. The upper and lower extremities are missing. Frank thinks some animal(s) may have removed them. [REDACTED] camped out for 5 days after finding the skeleton in a search for the extremities, but did not locate any of them. Part of nose was missing and the nasal bone(s) was shattered, as if due to a bullet wound instead of being gnawed by an animal. The remnants of the fins come out toward the back and the back ribs lap over the back bone (vertebral column, in humans) from each side.

At the top of the vertebral column, there is a slanted disc onto which the skull is connected(?) and the skull is able to completely rotate about the axis of the vertebral column. I said that perhaps the skull was unrestricted in rotational movement as the soft tissues(?) were probably not there now to do so, but D. said these tissues were still there. D. likened the slanted disc to being like taking a piece of biscuit dough, flattening it to about 3/4 " thick and making a depression in the center of it. He said it has a nervous system and spinal cord. As D. described its position, or construction, it seems that this makes sense as it explains how the skull could rotate 360° without disrupting the spinal cord and/or nerves, as would occur in a human. The nerves come out at the base of the skull and run downwards on either side of the back bone (vertebral column). The nerves are of different sizes, some like a lead pencil (does D. mean the size of a lead pencil, or the size of the lead in a lead pencil?), and others smaller. He said there is a spinal cord. The teeth are jagged. Liz remembers hearing Grant say they were in two rows and offset.

This creature was in a military area, which is still an active base and is known as Camp Chaffee. D. understands it was spotted by a soldier within the military grounds and an intense search was made for it by the military - many soldiers, helicopters. The roads were blocked - it was thought it might be in a car, but it was not found by the search crews. It was found about 4 weeks later by [REDACTED] friend, Frank. It was about 50' from the fence separating military property from civilian controlled property, and it was on the civilian side. D. thinks it was probably shot by a soldier with this explaining the appearance of a partly destroyed nose bone(s). As noted, it was not decayed. Taken to the U. of Oklahoma months later tests were performed. No DNA could be found and this was confirmed by additional testing at the U. of Calif.; D. is going to send me some test results, including those on the hair(?), and two additional photos, especially to show the fins.

p.2

- In the afternoon of January 1960, while driving along between 4 and 5 PM, in his periperal vision Dayne noted something moving and first thought it might be a B52. He rolled down his window and noted there was no sound. Then, looking at the area of the object, noted that it was cigar shaped, about 300' long. ^{It was 1000' up in the sky and was silver.} It was about 1/4 - 1/2 mile distant from him, and it seemed to be following him. D. could see it through the trees part of the time as the leaves had fallen. D. came up on a small hill and stopped. The UFO also stopped. It seemed to be suspended much as a tethered balloon. D. said he did not feel frightened. D. was driving at 10-15 MPH. D. then drove down and toward some people he knew and then came back up out of a "swag" and he expected the silver cigar shaped object to be gone, but it was still there. D. calculated that if ^{he} continued on the road he could come to a place that would intersect the object and he could view it directly overhead. D. drove as fast as he could on the dirt road (approx. 60 MPH) and when he got there the object was moving away and very quickly it disappeared into the distance.
- * The cigar shaped object was about 1000 feet up in the air and was about 300 feet long, and was silver.
