Subject: Re: New Potential Witness to SAC missile event

Dear Steve,

Today I spoke with Mr. [REDACTED] who in March 1967 was involved in a UFO event at which SAC missiles were rendered inert by a UFO. I have pasted the text of my notes below (I guess you still cannot open attachments), as well as in the attached MS Word document.

In my conversation with [REDACTED] he expressed reservations in working with CSETI or DNP due to several areas of concern with CSETI in particular:

- His perception that CSETI's field work in contacting and vectoring ET spacecraft was unbelievable and possibly involved "fringe" UFO enthusiasts

- CSETI's motivation for a disclosure was unclear

- Rumor that CSETI has "appropriated" the Best Available Evidence from others and called it their own.

I addressed each of these concerns specifically with Bob, after which I think he was much more comfortable with a potential association with CSETI & DNP, however, I feel that a call from you, Steve, would firmly put him in our camp with some of the most incredible information I have heard from a military witness.

Please give him a call (he's expecting it) this week at: 805-640-7101 (Ojai, California, near Ventura).

Bob can confirm the long heard rumor of UFOs conducting technological demonstrations at ICBM sites; inerting these weapons.

More to come during this next week of a most productive trip.

I will be back in Florida 14 August, but will be in touch from the field.

Best regards,

Will

Salas, Bob - [REDACTED]

According to [REDACTED] was witness to SAC missiles being deactivated in silos during UFO flyover.

event

- 8-6-0Contacted [REDACTED] via phone today. While he has no problem in being public with his incredible information, he expressed strong reservations in working with CSETI or DNP for the following reasons:
1. His concern that CSETI's UFO field work includes some "fringe element" methods/people in vectoring in and communicating with UFOs and their alien occupants.
 2. CSETI's motivation in effecting a disclosure is not clearly stated.
 3. Reports that CSETI "acquired" the Best Available Evidence from others and called it their own.

I addressed each of these issues in detail with Bob to include my own satisfaction that CSETI's methods, while certainly unconventional, were accepted by other credible researchers such as [REDACTED]

etc. I also restated CSETI's mission statement and disclosure objectives. Finally I described CSETI's long effort to assemble the BAE, and the circumstances leading to its proprietary information being purloined by others. Bob seemed thankful for this new information and more inclined to be supportive of our efforts.

Following summarizes my conversation with Mr. Bob Salas this date:

Bob is concerned, like Eisenhower, with the UFO/ETI issue being controlled by the "military-industrial complex", and its failure to disclose information to the American people.

On 17 March 1967, 1st LT. [REDACTED] USAF was the Deputy Missile Launch Officer for the "Oscar Missile Flight Crew", 60 feet below ground in the Missile Launch Control Center (LCC) at Malmstrom AFB, Montana. The Launch Control Officer was Fred Bywald who still lives in Las Vegas, NM.

Early in the morning of 17 Mar 67, the LCC received a report from a perimeter guard that he observed unusual lights in the area of the missile field. Shortly thereafter, a 2nd call from this, now frightened, guard described a glowing, oblong, red/orange object hovering silently outside the front gate. Suddenly the guard had to hang up the phone to the LCC due to a fellow guard being injured on the perimeter fence (non-UFO related).

Almost simultaneously with this sighting above ground, eight (8) SAC ICBM missiles went "no-go" with missile [REDACTED] system failures, and a perimeter [REDACTED] al was recorded.

Salas notified the Launch Commander, who had

beer sleeping after his watch.

Content-Transfer-Encoding: 7bit

VHF radio contact was lost with the guard force who had been sent to investigate a second UFO sighting at a 2nd missile silo complex.

Nearby "Echo Flight" (missile complex) O.E.N. 50 miles away also had all 10 of its "birds" (missiles) inerted within 60 seconds while a UFO hovered nearby. This event was observed by many witnesses who reported back to the LCC.

This number of ICBMs being rendered inert by a normal failure was not possible under any conditions according to the USAF.

A subsequent USAF investigation included assistance by contractor Boeing, Inc. There was a TELEX message noting the extreme emergency in investigating this event.

At 1000 on the 17th, [REDACTED] was relieved during a routine change of watch, and confronted the security guard as to whether or not this event was a "prank". The guard assured him it was not and described the Echo event.

*Bob returned to the base which by this time was "in chaos" and was debriefed on the event by the Base Commander and AFOSI, and made to sign a non-disclosure statement.

In 1994, Bob sent a FOIA to the USAF and received a copy of his unit's "History" which included mention of the Echo site loss of missile control while never associating UFO activity with that event. The report noted that "Rumors of UFOs were disproved."

Bob and the Echo site C.O. and Deputy C.O have all testified to this event on "Sightings" TV program.

This concludes the report of this incident.
