

To: Dr. Steven Greer

From: L [REDACTED]

Subject: 8/22/00 Phone Conversation with [REDACTED]

[REDACTED] is a physicist currently working on dimensional mathematics—a mathematical description of consciousness. Says he is very into physical data, “even though it doesn’t mean anything.” He has worked on measuring ESP and altered states (induced by drugs and meditation, etc.). He is into social psychology, cultural viruses, belief systems; says ETs are a phenomenon currently happening in our belief system. He’s a linguist who has also studied dolphin communication, and says their clicks are a form of algebra—a very advanced form of communication. He taught Metaphysics at Harvard, and [REDACTED] took his course. He is prone to going off on many tangents with lots of psychobabble.

He had Top Secret clearance and worked in Area 51. The Army found his photographic memory useful—the type of memory where he would see and remember relationships/connections between people or things. He said the Army was more involved in secret projects than the CIA. While in Area 51, he saw lots of inanimate grays hanging in a room—manufactured, but not yet animated. He did not work with them. He said the 4th Roswell ET lived in Area 51 for many years until it walked away.

At Boeing, Vault 7, he saw documents indicating that the 1964 Mariner spaceship discovered water on Mars, in 1965 the first attempt was made at terraforming Mars, and in 1967 there was a joint manned expedition to Mars by the US and the Soviets. He thinks the Cold War was a cover for this collaboration. He said the earth’s pole shifts are due by 2005, and no one will be able to survive on earth; man will have to survive elsewhere in space.

He worked on mind control with Mankind Research Unlimited (MRU), still located on Wisconsin Ave. in D.C. and headed by [REDACTED] who ran it for the Army and is still there after 35 years. They worked with ESP, mind-altering drugs (ketamine, Jacob’s Ladder), and mind control.
