

Subj: Witness Report - [REDACTED]
Date: 08/20/2000 10:43:59 PM Eastern Daylight Time
From: [REDACTED]
To: [REDACTED] (Steven M. Greer M.D.)

Dr. [REDACTED] who spent the weekend with us) was on a US Navy spyship ("Duxbury Bay") as the ship's doctor in the Persian Gulf in the early '60s.

He was a first-hand witness to the following incidents:

1) He was told by the ship's communications officer to look up in the sky at a certain time the next day. He did, and, in broad daylight, witnessed a UFO traverse the sky at the indicated time.

2) A UFO landed in the Saudi Arabian desert, and some of the Bedouin's camels got too close, and were burned. As the Bedouin were intelligence assets, as a public relations gesture, [REDACTED] had to arrange for medical treatment for the camels.

An interesting question is - were these UFOs ours or ET? He doesn't know.

[REDACTED] a neurosurgeon, was also the one-time protege of one of the highest ranking Intelligence officers in the business ([REDACTED] one-time assistant), who also ran, or was close to running, the whole ET situation (Project Dolphin). He is a repository of much additional second-hand information. However, his first-hand knowledge is limited to the above two events.

This second-hand information should only be discussed in person with him initially. He is a POC to several other individuals, most of whom would be "hostile" witnesses and have to be subpoenaed by Congress. One such individual was a lead negotiator with the ETs at, I think, Nellis. Another used to track UFOs coming out of an underwater base with a Navy catamaran.

He is a working doctor, and lives in [REDACTED].
He should be contacted ONLY by Dr. Greer regarding filming.
His office number is [REDACTED]

Incidentally, the four of us (including his girlfriend) had a nice gesture from a shooting-star like object while out on the patio, which scribed an upside-down C trajectory in the sky in front of us while we were star-gazing.
