Dr Green

Event occurred late 1972 to early 1973.

★ |

I was stationed at NAS Leeward, Guantanamo Bay, Cuba (GTMO). GTMO is a semitropical desert environment. It has a two-three week rainy season in October, and is visited occasionally by hurricanes, but is otherwise hot and dry. Movies are viewed at night in outdoor theaters base personnel called "lyceums".

I was watching a movie alone at the NAS lyceum. I have no idea what movie. The theater at NAS had only one projector, so there was an intermission as the projectionist changed reels. There was no concession stand and no lights were turned on during the reel change, so unless one needed to relieve oneself, the standard practice was to lean ones head back and gaze at the night sky until the next reel began.

As I gazed at the sky lost in thought, one of the brighter stars streaked across the sky and came to an abrupt halt. Startled, I continued to watch, as it streaked off in another direction and came to another abrupt halt. It did this again, arriving back at its starting point, describing a triangle. It retraced the first leg of the triangle, paused briefly, then shot straight up out of sight.

Stunned, I looked around to see if anyone else had seen this. I heard other viewers asking each other in wonder if they had seen the event, and what they made of it. They were clearly as bewildered as I. One of the greatest mistakes of my life was not gathering these witnesses to report or at least discuss the event. These men and I worked daily around the latest military attack and fighter aircraft, and there is no way what we saw was of our technology, then or now.

[REDACTED]

Significant data:

Event was viewed by a group of military aircraft professionals.

At no time did the color or intensity of the UFO vary.

There was no evidence of jet or rocket propulsion.

I have no frame of reference to estimate the size or height of the object.

The distance traveled on each leg was approximately the distance between the front lip and the end of the handle of the big dipper.

The time required to travel each leg of the triangle was less than 1 second.

The pause at each corner was about 5 seconds.

Final pause prior to disappearance was shorter, about 3 seconds.
