

A LITTLE BROTHER, the functional scale model at left shows what the EMA prototype below looks like minus batteries and without the extra apparatus of the pedestal. Within the engine itself, only three surfaces make physical contact.

Photos by Jack Scagnetti

OTHER POINTS OF VIEW show the control board (left center) and the standard transmission (left) attached to the prototype. Gray, who ran the engine for PROBE at his laboratory in Van Nuys, says the prototype has had "considerable operating test time."
