

# “STAGECRAFT”

## (Exposing the Imposters)

A technical scientific white paper report written by Michael Schratt 4/25/18

The following criteria/bullet items can be used to identify man-man (terrestrial based) UAP (Unidentified Aerial Phenomena):

- 1) Test flights occurring on Thursdays. (ref Hudson Valley Boomerang 3/24/83, “Aurora air-quakes” over Los Angeles 10/31/91, 4/16/92, 1/30/92)
- 2) Mechanical looking understructure of craft consisting of “tubes pipes and cylinders” also “cross-beams and girders” similar in appearance to a “truss-bridge” or “erector set”. (Hudson Valley Boomerang 1982-1989, also reference Belgium Triangle 11/7/89 & 3/30/90).
- 3) Bottom of craft resembling “stacked building blocks” or “Legos”. (ref Southern Illinois Flying Triangle 1/5/00)
- 4) Bottom of craft composed of what appears to be HVAC “vents” or “grill-work”. (reference Monique O’Driscoll sighting Kent NY 2/26/83)
- 5) Transparent or translucent panels on lower surface. (Taconic State Parkway sighting 3/24/83)
- 6) Multi-colored flashing lights. (Monique O’Driscoll sighting 2/26/83)
- 7) Lights that go off in sequence: red, blue, green, yellow, white (ref Monique O’Driscoll sighting 2/6/83)
- 8) Low frequency “humming” noise similar to an electrical transformer or “sewing machine”. (reference Hudson Valley Boomerang 1982–1989, Belgium Triangle 11/7/89, Southern Illinois Flying Triangle 1/5/00)
- 9) Static on radios as craft enters local area which then disappears as craft departs aka electromagnetic disturbances. (reference Ed Burns sighting Millwood NY 3/24/83, and Monique O’Driscoll sighting 2/6/83)

- 10) High intensity “spotlights” shining down from craft. (ref Hudson Valley Boomerang John Miller sighting Brewster NY 3/24/83)
- 11) 180 or 360 degree “flat” turns as though spinning on a “turn-table”. (ref Taconic State Parkway sighting 3/24/83)
- 12) Lights that appear to be “embedded in concrete” as objects rotate about vertical axis. Lights stay in complete formation relative to one another during turns. (ref Taconic State Parkway sighting 3/24/83)
- 13) Craft following the contour/path of major freeways or expressways. (Taconic State Parkway sighting Millwood NY north to Yorktown Heights 3/24/83)
- 14) Evidence of “fuzzy or blurred” edges on outer perimeter of craft indicating the possible use of an airborne holographic image projector. (ref Phoenix Lights sighting 3/13/97 also Air Force 2025 report section 5.6)
- 15) Radiation poisoning of local area. (ref Cash Landrum sighting 12/29/80 Huffman TX)
- 16) The appearance of “spark gap” mechanisms or “electrical probes” connected to the primary structure of the craft. (ref Maracaibo Venezuela sighting 12/26/72)
- 17) Evidence of “rivets” or fasteners used to hold primary structure together (ref Helena Missouri sighting 3/5/03)
- 18) Strobming lights that run back-and-forth along front, sides, or rear of craft (ref Belgium Triangle sighting 11/7/89 and Southern Illinois sighting 1/5/00)
- 19) Craft camouflaging or hiding itself against background by using “electrochromic panels” (ref Officer Craig Steven’s sighting Millstadt Illinois 1/5/00, also ref Popular Science May 1997)
- 20) Evidence of small orbs detaching from main craft (ref Belgium Triangle 11/7/89, and Yorktown Heights sighting November 1985)
