

Major Donald Keyhoe, a former head of NICAP and the premiere pioneer of the "outer space" hypothesis, shared a few details of one encounter in the early 1970s when 3 U.S. jet interceptors disappeared without a trace. I recall asking him if I could publish the full story in my book, *Situation Red: The UFO Siege*, but he agreed only to the barest details, declining to name the coastal location where the incident occurred. He said he feared he might compromise his Pentagon source.

I know of a number of off-the-record encounters with UFOs, both old and new, most of which I never published. In one recent incident in Arizona, the instruments of 2 fighter jets went dead, and crashed. Others, to name a hot spot, is in Puerto Rico. Three such incidents have been investigated and released by researcher and journalist, Jorge Martin, which he published in a lengthy report covering intense activities on the island released at the MUFON Symposium in Richmond.

World War II's Foo Fighters: A 1942 Crash Case Revealed

The following UFO crash/retrieval case, occurring in 1942 during WWII, is so shrouded in super secrecy that persons and places involved are not for me to know except for the identity of my informant, Mary Nunn. Using this pseudonym, and in respect to her source, she also prefers that her location not be identified in this report. Serving in a key civil capacity at the time of the incident she said that her source could suffer severe penalties if certain details were divulged.

However, to soften the stigma of no-no's, my informant seemed to shy away from the glitzy fringe in her UFO research and has felt free, in the past, to pass on other important and sensitive information to me without too many restrictions. Some of it concerned Roswell from a former military source but his guarded disclosures, minus name, are already in public domain and I find no need here to review them lest it may compromise her link with her deep-throat source.

Nunn's revelations about the 1942 case are sketchy, mainly dealing with the description of the retrieved bodies and some general input regarding the craft. She hopes that others, still alive, may share additional information or at least, confirmation of the event.

The spacecraft, she said, is still held at the army base where it crashed causing damage to a building on the premises and minor ruptures to the one side of the craft. According to her source, the crash occurred in a state "north of Georgia", but there was no explanation given for the reason why Georgia was named. Unless it was a deliberate cover, it suggests that it may have been in the Carolinas or somewhere north along the Atlantic seaboard.

The craft generally round in shape was described as 15 feet wide and 10 feet high divided into three main sections, a control room, a compartment with four seats and a bottom bay equipped with a trap door exit. In the control section was one large window and a number of smaller windows around the sides. The craft, she said, was silver in color which exhibited markings on it's exterior as well as inside.

The four crew members taken alive, died about two weeks later of apparent starvation. Described at 5 feet tall, weighing about 90 to 100 pounds, the skin also, unlike the little greys, was a milky white, smooth like a baby's, and without hair.

Facial features were generalized, the eyes large and black like bug eyes, ears were small, lips thin slits. The fingers, numbering five, were long, bony; the feet flat, about size six with half inch bony toes. The female had small breasts and, according to the source, the race could

reproduce but there was no hint as to their genitalia. Then came the shocker: *They had teeth, very white, wide and short.* With teeth, I asked about nourishment, how it was digested and eliminated. No answers.

Like the greys, communications were telepathic but when I asked about other details, anatomical, organic or emotional or about their craft, propulsion and all the other usual questions, came silence; that was it. Perhaps my friend, Mary Nunn, knows more but I am thankful for that which she had trustingly shared.

The 1942 crash incident, whatever the explanation, as a precursor to the Roswell affair, according to Nunn's source, happened in the summer at a time when the United States' armed forces were in action worldwide. But it still was not an historical first. In the Spring of 1941, an alleged crash and recovery occurred in Cape Girardeau, Missouri, which is described in my book, *UFO Crash/Retrievals: The Inner Sanctum*.

Pre-WWII UFO activity, especially crashes, are a rarity and getting details from a firsthand, or a support, witness is indeed an achievement. Walter Webb, an astronomer and veteran UFO researcher, gets an "A" for his extensive investigation into a UFO incident, possibly a crash, involving an army serviceman, the late Guy Simeone, with the 26th Infantry Division prior to the U.S. entry into the war. According to Webb, who wrote an in-depth monograph for CUFOS about the alleged incident, titled, *An Anecdotal Report of a UFO Crash/Retrieval 1941*, Simeone, who was one of 400,000 troops involved in a massive war-game maneuver in the Carolinas, informed his family, cryptically, that he was restricted from discussing his "secret assignment" during operations. Later a witness told Webb that she overheard Simeone's mother talking about her son being in a situation involving a crashed round metallic object and a reference to little dead bodies from space. However, there are conflicting details, said Webb, from family members and friends. The best guess, said Webb, is that something crashed in North Carolina where his unit was active during the month of October in 1941. Concludes Webb, "Taking everything into account, I believe the Simeone episode should be classified as a tentative unknown."

Question: While the Simeone case probably had no connection with the 1942 incident, occurring "north of Georgia", were the three WWII era crashes happening so close together, time-wise, a freak coincidence? Hardly. Or, were the mishaps a result of increased surveillance during a period of world conflict which began in September, 1939?

Digressing a moment, despite the reports of early mishaps, I opted to stretch a bit in my working hypothesis to allow for the susceptibility of crashes in 1947 in the USA Southwest, notably in New Mexico. As a postulate, the alien mindset may have had a concern for the U.S. rapid development of a nuclear and rocket-missile arsenal, and thus, were willing to take greater risks in low-level tactical missions. And, despite their marvels of technology, it is feasible that they may have underestimated the effects of radar or New Mexico's sudden violent electrical storms.

Once again considering the 1941-1942 incidents, one other aspect to lend credence to an early alien presence during WWII is the so-called foo-fighter, a frequent aerial interloper observed by personnel flying in all types of military aircraft, in all theaters of war. Numerous reports of encounters started coming in during the latter part of 1943, a few earlier.

One early-on foo-fighter incident, following the Pearl Harbor sneak attack occurred over San Francisco and Los Angeles in 1942. For details of this well-known incident, I refer to a massive report, *The White Sands Proving Ground UFO Incidents of 1947*, by researcher, Tim
