

White Sands Missile Range double sphere UFO encounter

On June 14, 1949 a significant UFO encounter took place at White Sands Missile Range in New Mexico. A crew of Navy engineers and technicians under the direction of Commander Robert B. McLaughlin were conducting an upper atmospheric test, when the missile they had fired was joined (one on each side) by two unknown silver colored metallic spheres which were approximately twenty inches in diameter. During its ascent, the missile had attained a speed of 2,000 feet per second (equivalent to 1,363 mph). Soon thereafter, the circular shaped object on the left broke formation, descended below the missile, and passed directly through the missile's exhaust. Then, the strange object joined the other unknown spherical shaped UFO, and together they accelerated upwards *leaving the missile behind*. Shortly after the encounter, Commander McLaughlin received independent confirmation from five separate observation posts that also witnessed the unusual event. To date, no *known* government has been identified which had the technology to build vehicles that look or fly like the ones mentioned in this case. Source: NICAP, *Uninvited Guests* by Richard Hall
