#2

File 1) witness

Dear Dr. Steven Greer,

First: I have just learned from [REDACTED] and [REDACTED] that the reason behind the operation of this new motor/generator device is the following: The newer, stronger magnets and the way in which they are used in a motor/generator essentially magnifies the horsepower per watts by a factor of 14. In other words, one can no longer use the concept that it takes 756 watts to provide one horsepower. Properly done, it takes only 1/14th the amount that standard engineering would specify. Earlier I had asked [REDACTED] what is the source of this extra energy? He said that it came from the magnetic field and that could be established by using the original Maxwell equations. The original Maxwell equations used tensors. Apparently it was Heaviside who changed the equations to partial differential equations and, in the process, lost part of the real meaning. I believe that we are now in a position by which this combination of practical construction, proof of principle, and the correct Maxwell equations can be used to properly model this discovery. Such a model would, of course, open up a vista of new devices, inventions, and discoveries.

By the way, one of the issues of the J. of New Energy was a 300-page, 60-article compilation, of "The NEW Maxwell Equations."

Second: I have just learned the following (which you may already know about). One of [REDACTED] close associates has been affiliated with the intelligence community for some years. Here is an interesting story. A small group of people were looking over some of the test area in New Mexico that is used for testing missiles. They came across a circular "saucer" about 30 feet in diameter. The door to the craft was open but no one was around. They agreed that one of them with a camera would enter, take pictures, and be back in 15 minutes. The person entered and found that he seemed to be in a place as big as a football stadium. It was lined "filled" with equipment. He took a lot of pictures and by his watch exited in 15 minutes. When he emerged his companions were yelling at him and were highly concerned. They said you were supposed to be in there 15 minutes. He showed them his watch and claimed he was right on time. "You've been gone four hours" he was told.

Apparently, the "government" examined this "craft" and built a building over it and it is, reportedly, still being used as a laboratory. The craft landed in 1962.

[REDACTED] in his experience with a special type of plasma has found that time is altered. Thus the intense interest in this report.

[REDACTED] thought you might like to know about this, in case no one

has related this information during the disclosure project.

Best personal regards, [REDACTED]

[REDACTED]
