I very much look forward to meeting you with Alain soon in Washington and out at our country home in Virginia near Monticello (Thomas Jefferson's house).

Of course my background in medicine (ER/Trauma) was highly technical, and my uncle was the senior project engineer who built the Lunar Module at Grumman (now Northrup Grumman). But I learned very early that any interstellar civilization must, a priori, have technologies beyond the speed (or resonance frequency) of light- and voila, now we have crossed into the etheric, the realm of mind, thought and awareness. It is really just that simple- and fascinating!

Recently we have found that our visitors are quite interested in interfacing with electromagnetic sensors/devices and had 5 hours of such transmissions out of Orion in November of 2008 at Joshua Tree National Park. We will have much to discuss and it will be a pleasure to meet you.

Best always,

Steven M. Greer MD

Dear Sir,

May I presume to introduce myself and tell you how glad we are to meet you in the near future ?

I am nearly through your book "Hidden truth - Forbidden Knowledge" and I have found a few surprising elements which whet my appetite. My own approach is much more technical, aeronautical if you wish, as you will judge when we meet. Besides being a technician I have been interested for a long time in Zen Buddhism and my wife and I teach Aikido. Some say Aikido is Zen in movement, so there may still be hope! I would be very interested in participating in a CE-5 experiment with you. We might even fly back to the States, later on, if there was any possibility,... unless you could accept to spend some time in France, at our home, to see if the Continental climate is favorable to that type of enterprise.

Until then, we shall wait and see, discretion being what it is..

Our best regards
