

PhD in History, professor
President of the Academy of Geopolitical Problems
Colonel-General, previously Head of the Main Department of International Military
Cooperation of the Ministry of Defense
Association "Ecology of the Unknown", Honorary Science Expert

Cosmos is a Living Environment

English subtitles

The United States of America is now launching
a seemingly fantastic program

It would seem that this is a kind of illusion, a fantasy
that has no real relation to the security of our country,

the planet and all of humanity, but I believe, based
on my military experience, life experience

and based on the implementation of the Star Wars program that the United States
conducted, I see,

that this fight against aliens
and flying saucers is just a cover-up.

In fact, it runs a huge
program - a special access program - that

even the President and Congress are not allowed
to receive reports of. This program is about an intrusion, a dangerous

intrusions into the space environment. More than 30
special access programs are launched and funded

by the United States for the invasion of space.
Why do I believe that this threat can be, and is

the most important, the most crucial threat
to the life of humanity today? Because, first of all, space -

is a living environment, it is not some dead emptiness,
which is usually spoken of. But there exist in space

other life forms, and this has been proven by both
Russian and foreign thinkers, including

academician Vernadsky, academician Kaznacheyev, Kozyrev and others. Here we are,
living on the planet

Earth, we are part of this large living system -
the Universe, and therefore any invasion of space,

especially for the purpose of placing, testing and
using new weapons, new types of weapons,

weapons of mass destruction, far superior
in their lethal effectiveness to nuclear weapons,

poses a threat to humanity. Yes, the threat
of the destruction of all life on planet Earth.

Therefore, today it is necessary to deal
seriously with space for all mankind, for the elite, and so on.

No more launching weapons into space, no more creating
weapons. Here was created as a result

the implementation of the "Star Wars" program,
and this is a climate weapon, this is an informational

and psychological weapon, when
billions of people are struck from space, they change the consciousness

of people. This is a weapon that can turn off all
life programs. That's it. Today

the Americans are trying to create even more
deadly weapons, and from space to influence the

all processes on the planet Earth. This is a lithospheric
weapon, this is all kinds of infections, viruses, and so on

and so forth. Therefore, today we, all
earthlings, must categorically oppose it.

Conduct joint international research, rather than shutting down to clandestine programs.

Give access to educational programs to make space our safe habitat. Safe! Use its energy.

Use space for the benefit of all the people of the planet

and all nature, the living nature of the Earth. You have to

raise this voice in defense of the security
of space and understand that in any invasion of the

outer space is like an invasion of the
system of our genes - the human genes.

An invasion with evil intentions in space, will affect the situation on the planet Earth, the
health

and the survival of humanity, the preservation of life
all living organisms of the planet Earth. And at the same time

it should be taken into account that neither the American state,
nor the President, nor the Congress implements these functions.

Secret programs, namely people who are in the shadows - what Donald Trump, the
President

Trump called it the Deep State. These are people who bring evil to humanity, people who
speak out

for the destruction of more than 6 billion people
on the planet. And at the same time, you need to keep in mind...

Yes, surely aliens in one form or another
and in one way or another are present on the planet

Earth, because out of billions of galaxies, even according to the theory of probability, there
is no chance that organized intelligent

life exists only on the planet Earth. But
so far, the extraterrestrials have not caused any damage with their presence -

no damage to earthlings, infrastructure, or
any other living organisms on Earth, so

to say that there is an alien threat,
well, that probably doesn't correspond to reality.

And if others - extraterrestrial civilizations - have
contact with the Earth, they are more developed than us

and they are educated, and they understand that in any living system, especially in the
system of the Universe,

in the system of universal civilizations, you can not

damage another element of this life,

without destroying this system as a whole. So,
please, scientists of Russia, yes, I believe, of the whole world

we are ready to discuss the problem of "alien"
presence: other extraterrestrial civilizations.

And no doubt that making these programs clandestine and trusting people who do not seek
to provide

a normal life and the safety of all
life on the planet, of course, is unacceptable!
