We have a report on the CSETI UFO Crash List (now over 240) of a UFO being shot down during Desert Storm. Interestingly, the report (and who knows if it is true) indicates that this was the 2nd UFO that was shot down.

The craft in question seems to have been ET, though many times the "ET" scenario serves as a useful cover story to hide the fact that they are in fact of terrestrial manufacture.

Now here's the \$64M question.

What of the Soviet UFOs??

We now know that in fact the Soviets are the world leaders in non-linear EM engineering, and electro-gravitics goes hand in glove with free energy production (remember Floyd Sweet's negative resistor could also be made to levitate). So by extrapolation, it would be inconceivable that the Soviets would NOT have ARV's.

And there are clues. Read the enigmatic "Fire from the Sky - the True Story of the Space Shuttles" by One Who Knows. It lays out in explicit detail that the Russians have been using self-levitating CosmoSpheres as weapons platforms since the '80s, and are now into their third generation of craft. Have recently learned that the publisher of this monograph was probably executed in 1995.

So much more went on in the Gulf War than we saw on CNN. Perhaps, as Iraq was a Soviet client state, we had duelling US and Russian ARV's. Tom Bearden has also published extensively that quantum potential weapons (possessed by only 3 nations - and not the US) were deployed during this conflict, causing, amongst other things, the Gulf War Disease. A prototype of this weaponry was also deployed during the US air attack on Libya in 1986 causing all kinds of electrical problems for the planes. Libya, of course, was also a Soviet client state.

All of the above of course IMHO.

Report is at [http://\[REDACTED\]](http://[REDACTED])
