

SIGHTING BACKGROUND (Based on initial input)

Between June 1949 and January 1960, the witness held several engineering and management positions at Wright-Patterson AFB (WPAFB), near Dayton, Ohio. During the sighting period, he worked within the Air Material Command (AMC), Installations Division within the Office of Special Studies headed by Dr. Eric Wang. The witness' specialties at that particular time included: Engineering design of Air Force engine test cells and Research and Development of techniques to be used for determining blast effects on buildings and structures. He also was involved in the design of aircraft landing gear and became Chief Of Alighting Devices at the Aircraft Laboratory, Wright Air Development Center. This position, in turn, led to positions of Management at WPAFB and later within the civilian defense industry. (See Attachment 7 and Attachment 8 for details) His present employment is with the GTE Sylvania Eastern Division. At the time of the alleged incident, he was on an assignment at the Atomic Proving Ground in Nevada. (See Attachment 3/Event Key 1) Also, refer to Attachment 4, a page from his personal diary.

SIGHTING ACCOUNT (Based on initial input)

PLEASE REFER TO ATTACHMENT 2 and Investigator's Notes below.

INVESTIGATOR'S NOTES (TO ATTACHMENT 2)

I. PARAGRAPH (3)

The witness remembered someone stating that the watches might be affected by radiation or something. (Magnetism?)

II. PARAGRAPH (4)

- A. It was nighttime when the team disembarked at the crash area. The object was about 50 feet from the bus.
- B. The terrain was hard-packed sand and was not paved.
- C. Two bright spotlights were behind and to the left and right of the crashed object.
- D. The spotlights were so bright that it was hard to see the surrounding area.
- E. The hatch or door was curved to correspond with the curvature of the side of the object. It was located 20 degrees from what appeared to be the aft end of the object. A light inside shined out in such a way that it prevented people on the outside seeing inside.

The opening was about 3 1/2 feet high and 1 1/2 feet wide. No hinges or supports were noted from the witness' vantage point but he felt that it had to be hinged in some way at the bottom. (See Attachments 5 & 6)

- F. He asked what material the craft was made of but was told that such information was classified.
- G. The rim joining the convex surfaces was darker in color and the witness thinks that it was "slotted".
- H. Each person allowed to examine the object was restricted to just that portion he was studying within the discipline of his particular specialty. This was gathered from the few snatches of conversation that he was able to accomplish with others.
- I. About 20 military policemen were guarding the area.
- J. One man allegedly glanced within the door and was reprimanded. On the way back to the bus, this man started to tell the witness about something strange about the inside of the object but a guard interrupted and asked them to refrain talking about the object.
- K. One civilian carried a box with some kind of instrument.
- L. When everybody was back aboard the bus, an Air Force Colonel, who directed the operation, asked them to raise their right hands and take an oath not to reveal any aspect of what they had seen and done.
- M. The witness was instructed to write his report in longhand. He was told not to type or reproduce his report. Upon its completion, he directed to call a number. He did and the report was picked up by an Airman.
- N. Total time elapsed at the impact area was about an hour.

III. PARAGRAPH (5)

- A. It was only after he saw the Colonel in this film, that he realized he had performed the investigation for "Bluebook" and that the object was probably not an experimental aircraft.
- B. Later, he came across and recognized the faces of two other Air Force officers as having been part of the investigating party.
 - 1) One was from the Rome Air Development Center, Griffiss AFB, Rome, New York.

- 2) The other officer was from the Air Force Special Weapons Laboratory at Albuquerque, New Mexico.

(He did not speak to either of them concerning the incident.)

C. The "Colonel"

The following telephone contacts were made in an attempt to identify the Colonel who allegedly directed the UFO crash investigation.

(May 16 - 18)

- 1) Major Donald E. Keyhoe (Retired)
703-743-6772(Home)
703-743-6909(Office)
- 2) Dewey Fournet (Former USAF Major/Pentagon
who monitored Project Bluebook)
504-766-9393(Home)
504-348-0131(Office) Ext. 3131
- 3) Max Futch (Former USAF Sergeant in Project Bluebook)
(Indirectly, via Dewey Fournet)
- 4) J. Allen Hynek (Former Bluebook Consultant)
312-864-1861
- 5) David Jacobs (Ph. D Candidate Thesis on History of
Project Bluebook, U. of Wisconsin)
608-255-6887(Home)
608-262-1234(University)
- 6) Robert Gilbert (Chief of Protocol, Air Material
Command, WPAFB during crash time-frame)
513-257-6225(Protocol, WPAFB)
- 7) Bernard J. O'Brien (Witness' Project Leader in 1953)
415-326-6200 (Stanford Research Institute/He is
no longer there/will try to locate)

My first thought had been that the Colonel may have been Colonel Frank Dunn, Chief of ATIC in 1951, who is mentioned in Ruppelt's book. (Chapters 9 & 10).^{*} However, Dewey Fournet and Max Futch indicated that Dunn had been replaced by Colonel Harold D. Watson who again was replaced by General Garland during the crash/time-frame. David Jacob's meticulous records confirmed this. Ruppelt also mentions a Colonel S.H. Kirkland, who was a member of Colonel Dunn's staff. (Chapter 9)^{*} As of this time, the identity of the Colonel remains in question. Mr. Robert Gilbert vaguely remembered being in the film as well as his brother-in-law (witness) mentioning an investigation

of a crashed experimental aircraft. He would not, however, absolutely vouch for either event and could not remember the name of the Colonel in the film. He was very polite but one had the feeling that he was extremely anxious to terminate the call! He did confirm his brother-in-law's positions at WPAFB as well as Dr. Eric Wang having been his supervisor. If the movie alluded to could be located, perhaps, with a bit of investigation, the Colonel's name and position could be identified.

D. The Witness' brother-in-law(Robert Gilbert)

In addition to the information Mr. Gilbert gave me, outlined in C. above, he also vouched for the character of Arthur Stansel. He said that he was an excellent engineer and not the type who would deliberately fabricate a story. We agreed that the telephone conversation would be kept confidential

ADDITIONAL WITNESS BACKGROUND CHECKOUT

I. JEFFERY YOUNG

TELEPHONE CONVERSATION WITH ON MAY 19, 1973

I had tried on several occasions to contact Jeff and finally succeeded on the evening of May 19, 1973. What he told me certainly demands an explanation by the witness, Mr. Arthur Stansel!

- 1) He had taped an interview with Mr. Stansel who is a good friend of the family. He had been completely unaware that Mr. Stansel had been connected with "Bluebook" until the subject of his book on UFOs came up.
- 2) He told Jeff that he and nine other men had seen an orange-yellow glowing UFO from the Atomic Proving Ground in Nevada during "Operation Upshot-Knothole!
- 3) After they were interviewed by Air Force UFO investigators, all 10 witnesses were re-assigned as consultants to Project "Bluebook".
- 4) He said the Project "Bluebook" was political in nature and that some "doubters" were assigned to the Project as well as "believers" according to the Project's need.
- 5) He told Jeff of the UFO crash investigation! He said that it took place in 1954 and that he was at WPAFB when he was assigned to investigate

the crash. (This fits in with what he briefly told me prior to his looking up certain events in his diary. The diary indicates that he was in Nevada at the time and the date was May 21, 1953)

- 6) He told Jeff that the object was "tear-drop" shaped rather than disc-shaped which could fit the description given me.
- 7) He told Jeff that the object had "visual sensors" on both top and bottom which were connected to TV-like panels inside the craft which displayed the images recorded by the sensors!
- 8) He stated further that there were two "swivel chairs" inside.
- 9) He then told Jeff that 1 body was found within the UFO. It was about 3 1/2 feet tall and was covered with a silvery, aluminum-colored suit. It had a "skull cap" on and its complexion was dark.
- 10) He said that the Air Force was worried that one may have escaped and was still in the area or was or would be rescued by another craft!

The above information was extracted from three-pages of notes taken by Jeff Young when he interviewed Stansel. I received the data via the telephone. I have not seen these notes but have persuaded Jeff to xerox them and mail them to me during the week of May 21-25. He also will try to make a copy of the tape for me. I shall phone him Monday and, if need be, shall visit his home and record from his tape personally. Due to personal commitments already made, I would not be able to accomplish this until late during this week. I did not want to involve one of my investigators in this.

If what Jeff Young related to me is true, Mr. Stansel did not tell me everything. Jeff also related to me that Stansel gave him written permission to use the material in his book! This again contradicts Stansel's insistence that his name be kept anonymous. Today is May 20, 1973. I shall await the receipt of Jeff Young's data before confronting Stansel with these newly-discovered facts. Until then, I have placed this report "on-hold".
