Producer

I am writing you in regards to the investigation of the metal artifact that has come to be known as [REDACTED]. I must emphasize that, in my professional opinion, after thorough scientific testing, that the origin, manufacturing process, and function of the metal sample are unknown. I have been the principle investigator on the electric field testing with the part that has been reported [REDACTED]. Preliminary conclusions are, when the part is placed in a large electric field a lifting motion sideways to the electric field is observed. At this time, there are no known hypothesis that explain the observations.

I have been a scientist for the Department of Defense since 1986. I have worked on projects involving laser physics, plasma dynamics, high voltage electronics, optical computing and many other topics since I have worked for the DOD. Enclosed is a resume and some of my publications are listed.

I have proposed to be the principle investigator on new and more accurate measurements to be conducted on [REDACTED]. I am willing to state any of the results of my research on camera as a scientist who has been researching these parts. I can not make any statement in an official government employee. I would like to emphasize that the research regarding [REDACTED] has been done by me in a private citizen capacity and not in a government scientist capacity.

Sincerely,

[REDACTED]
