CONNECTICUT AFFILIATE OF THE NATIONAL INVESTIGATIONS COMMITTEE ON AERIAL PHENOMENA (NICAP)

On 16 June 1967, this Affiliate received a letter (xerox copy) dated June 5, 1967
sent to NICAP in Washington, D.C. by a Mr. [REDACTED] Chief Engineer, [REDACTED]
Corporation, regarding a UFO sighted by [REDACTED] at Wallingford, Conn. on May 28, 1967.

As [REDACTED] gave his home address as [REDACTED], Connecticut, a copy of his letter
was forwarded to [REDACTED] of Branford, for further investigations.
Dr. [REDACTED] contacted [REDACTED] by phone and has forwarded the following account to
this Affiliate. (It is suggested that [REDACTED] original letter be at hand when
reading Dr. [REDACTED] report.)

* * * * *

A summary of the Wallingford, Conn. sighting of May 28, 1967 from 12:01 to 12:10 PM
by [REDACTED], age 47, and his 12 year old son.

[REDACTED] is divorced and living in [REDACTED] apparently with relatives. He was at
the home of his ex-wife and children in Wallingford at the time of the sighting to pick
up his children. He was apparently waiting outside the house.

The object was seen 15° to 20° above the horizon. It was the first clear day in a
while. The sky was clear except for some fair weather cumulus clouds. The temperature
was about 65-70°F.

[REDACTED] is an amateur astronomer and is a frequent sky watcher often using binoculars.
He was doing this at the time of the sighting. He does not belong to an amateur astro-
nomy club but has a friend, [REDACTED], who belongs to the [REDACTED] Amateur Astronomy
Club in [REDACTED], Conn.

(Another sighting he had was of a green fireball for about 10 seconds in 1942 in
Westport. Also about 6 months ago his son and daughter saw something he described as
an exact copy of a diagram in the UFO EVIDENCE; which diagram I'm not sure but the
object was a slender ellipsoid with a red belly light and white lights at each end.)

The object seen on May 28th was first seen at 12:01 pm (± a minute or two, I believe)
north of a cloud which was in the West, the object travelling north to south toward
the cloud about 15° to 20° above the horizon. The cloud had an apparent (north-south)
width of about 30° and an apparent height of about 10°. The object travelled about
40° from where it was first seen to where it entered or passed behind the cloud. The
cloud was not visually connected to any other cloud and he had its periphery in view
at all times/ after the object passed into or behind the cloud. The object did not
reappear.

He saw the object for about 10 to 12 seconds, the first 3-5 seconds with his naked eye
and about 7 seconds with binoculars. He estimated the speed at 500 mph, altitude as
3000 feet. Over the phone he said nothing about angular or actual size of the object
but the diagram in his letter comparing it to a Boeing 707 indicates that he thought
its actual length was about 3/2 times the length of a 707.

The object made no noise that [REDACTED] could hear (quiet neighborhood) and gave off
no visible exhaust. Its appearance is best described by the diagram in [REDACTED]
letter. [REDACTED] said the long axis of the object was ϕ about perpendicular to
his line of view when the object disappeared in or behind the cloud so that when he
first saw the object he could see its front to a degree. It was when seeing it that
he got the impression that the bottom half of the object was fatter relative to the

[REDACTED]

Gentlemen:

I would like to report a UFO sighting at Wallingford, Connecticut on May 28, 1967.

WEATHER: Clear, blue sky with a few fluffy, white clouds. No wind.

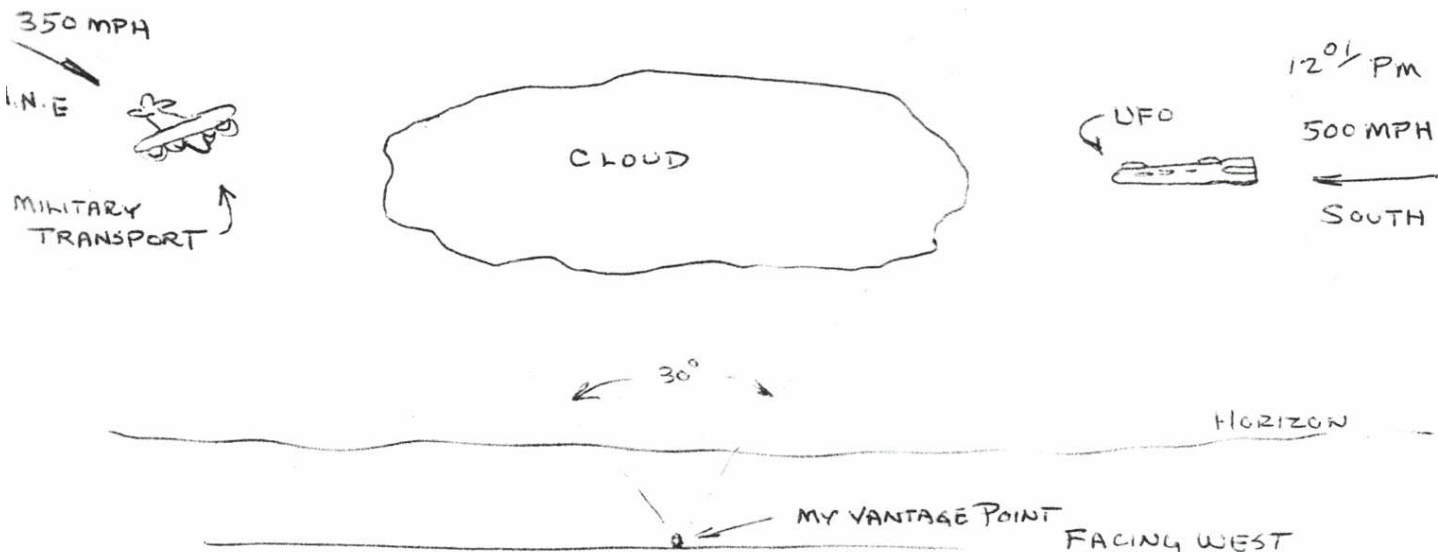

As I was observing the cloud formation, facing West, at 12:01 P.M. (midday) I noticed a bright, silvery, wingless object traveling North to South at approximately 500 mph and 3000 feet elevation about one mile away. I immediately picked it up with my binoculars (7 x 50) and followed its straight line course for approximately seven (7) seconds. (Total sighting time - ten to twelve seconds) at which time it went behind a single cloud which covered about 30° of sky from my vantage point. The object appeared as follows:

I dropped my binoculars immediately and was waiting to pick it up again at the other side of the cloud, but it never appeared at the other side. The cloud was all by itself and the entire periphery was in view at all times. At 12:03 P.M. I picked up a four engine military transport going N.N.E. at nearly the same spot where the object should

June 5, 1967

have appeared. At the other end of the cloud, but at slightly lower altitude and about 350 mph, 1/2 mile away (see sketch). This plane flew overhead and in back of me and went behind the hills at 12:07 P.M.

Meanwhile, my twelve year old son came out and we watched the cloud for any objects - at 12:08 my son (using binoculars) said he saw small black objects near the cloud (which I could not see without binoculars). He showed me where they were and I picked them up with the binoculars. They were tremendously high and were moving West - in formation (see sketch) at about the same rate as the Echo Satellite (which I had observed many times). No detail was discernable except that they looked like black dots with small wings at the middle and flying very high in perfect reverse V formation (see sketch). At 12:10 they were out of sight.

2 min
dur.

At 12:15 we observed a 707 jet passenger plane flying South at about 5000 feet and 1-1/2 miles away and approximately 350 - 400 mph in the same line of flight as the UFO and was in sight for approximately two minutes.

There was no reflection from this 707 which appeared white in color as against the bright, silvery color of UFO. The comparative sizes are as follows:

SEE NEXT PAGE

top along the whole length of the object at least as far back as the pods. The horizontal line in the middle of the object in his diagram was intended to indicate this.

After the object disappeared the cloud drifted toward the east bringing it closer to the location from which the sighting was made and thus to a higher angular elevation. When the cloud was not yet overhead at 12:08, [REDACTED] son (while with his father was watching the sky for the object or any others) saw through binoculars 3 small black objects above the right hand (north) ~~end~~ end of the cloud. (See [REDACTED] letter.)

The three black objects then seen by [REDACTED] with binoculars looked like black dots with wings at the middle (no other detail visible) and were moving West in a V formation with the top of the V pointed West. They were about 75° above the Western horizon. At 12:10 they could no longer be seen. How far they had gone in the 2 minutes he didn't say but I believe he indicated they were out of sight before going over the horizon. He said they looked like they were moving on a level path at an altitude much higher than altitudes at which airplanes usually fly.

[REDACTED] estimated the times involved with sighting the large object by counting seconds from the time it first appeared until it disappeared and then looking at his watch. He is accustomed to counting seconds while working with electronic computers on his job. He estimated the accuracy of his watch at about one minute.

Meriden airport is about 10 miles from where the sighting was made, he said, but he was sure the large object was no ordinary aircraft or even one seen under unusual conditions.

He thought it more likely that the large object went behind the cloud than into it. At one point while viewing the object sunlight appeared to be reflected from its rear dome. He said the reflection was off the part of the front part of the dome that was closest to him.

He believes his estimates of speed, altitude and size of the large object were fairly accurate due to his frequent viewing of aircraft.

He identified the military transport plane by its insignia (a star I believe) and its painted grey appearance.

The large object had a metallic sheen to it.

His diagram comparing the 707 to the large object was intended as a direct comparison (both to same scale).

[REDACTED] education consists of technical high school followed by 3 years of specialized education (just what I don't know).

To his knowledge there were no other witnesses except for his son but he did not look for any either.

He thought of the possibility that the large object may have moved away staying behind the cloud but had no opinion as to whether this or any other way was how it disappeared.

[REDACTED] has not read much on UFOs although he did read Keyhoe's first book.

I asked him if it could have been a normal aircraft, perhaps with only part of it being visible due to the angle of its possibly invisible surfaces. He said he was certain it was not.

I did some subsequent calculations based on the quantitative information he gave. If the large object was $15-20^{\circ}$ above the horizon and at 3000 feet altitude then it was ~~at~~ about 8800 feet to 11,600 feet from him in a straight line path. If, as he said,

it traversed about 40° arc then its distance of travel was about 7000 to 10,000 feet. If this took 10-12 seconds then its velocity was about 400-700 mph, which is consistent with his estimate of 500 mph.

The length of a 707 is about 144 feet, making the object about 215 feet long. At 8800 to 11,600 feet, this would subtend about .10 to .14 degrees or about $1/5$ to $3/4$ the angular diameter of the moon. The binoculars (7x50, Towers brand) has a power of 7, so the angle subtended by the large object when viewed with the binoculars would be about $3/4^\circ$ to 1° . The resolving power of the human eye is about $1/20^\circ$ so the object was about 15-20 times as long when viewed with the binoculars as the eye's resolving power. This latter fact, I believe, is quite consistent with the degree of detail he observed on the object.

All observations were from the same point. The military transport passed below the cloud (visually). I will write [REDACTED] about a few unclear points such as the apparent angular size of the large object, and why he waited so long to report.

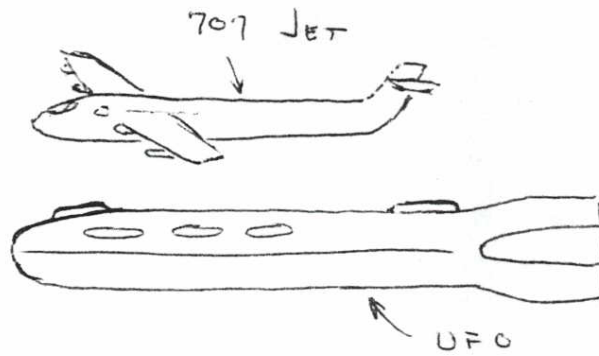

/s/ [REDACTED] Jr.
