President Jimmy Carter

*7 NOTE Address*

Dear President Carter,

I apologize for a letter in such close succession to my last missive, but strongly feel the necessity to write. My greatest respect, along with my heartfelt affection for you and your entire family, is ever-present in all of my thoughts.

I am writing in introduction to Dr. Steven Greer. Dr. Greer has achieved a singular place in our society by his work with a subject that is not easily broached, but what may well be of immense importance to the future of our planet. I have known of Dr. Greer's work for many years and have recently learned of an unprecedented, new alliance that is currently under negotiation between his organization and the executive and military branches of a G8 country. Please refer to Dr. Greer's letter in this package for further information.

You may recall his landmark Disclosure press conference at the National Press Club in 2001. His painstaking work with numerous members of the military, corporate and private citizens concerning numerous aspects of secret projects, UFO encounters and important technologies so desperately needed and yet currently denied to the world, tells of a man with great inner strength, vision and character. Much of this work is represented in the book and DVD's also included for your consideration.

Your unique position in the world as a US president, Nobel Peace prize winner, humanitarian, submarine commander and nuclear physicist along with my confidence in the sincerity of Dr. Greer, trumps my hesitancy in writing this letter.

It would be an honor for me to escort Dr. Greer for a private meeting, at your convenience, to brief you on this important alliance that could well have immense positive reverberations in transforming what may be a rather bleak future for us and many generations to come.

Sincerely,
