Dr. Greer:

Here is a brief synopsis of the incident I described to you on the phone this morning:

On March 16, 1967 I was on missile duty as a Launch Control Officer at a Minuteman Launch Control Facility attached to Malmstrom AFB, MT. Sometime in the morning hours I received a phone call from one of my security guards upstairs. I was in the Launch Control Center capsule sixty feet underground and unable to leave that facility. The guard said he and other guards had been seeing flying objects over the facility and they were not airplanes or helicopters. I didn't think much of this and simply ended the conversation. A short time later he called again. This time he was quite frightened and said there was a UFO hovering silently outside the front gate! He said it was glowing a reddish color. During this call he said one of the guards had been injured and he had to go. I woke my commander who was on rest period and began telling him about the two calls from the guard. As I was telling him about the calls our missiles began going into a NO-GO or unlaunchable condition. Nearly all of our missiles went into this condition within quick succession of each other. This kind of event had never happened before to our knowledge, for any reason. When we reported the incident to our command post, they notified us that something similar had happened at another facility (Echo flight). Later that morning we sent a security team to one of our launch

sites and when they arrived they reported seeing another UFO over the site. We were relieved later that morning and I spoke with the guard who had called me. He assured me that everything he had told me was true. When we returned to the base we briefed our squadron commander on the event and he was as shocked as we were. We were assured that this was no exercise.

Since the event was classified, we did not discuss it (even among ourselves) further. No further information was given to us about the Air Force investigation that followed. Some 28 years later, I saw a report of the Echo flight shutdown and submitted an FOIA request about the incident. The Air Force released the unit history of the incident and some teletype messages regarding it. With some additional effort I was able to locate the two officers who were on duty at Echo flight during this incident and my own commander. All of us can validate the essential facts of this incident. In addition I have contacted three other ex-military who could validate parts of this story: 1) A security guard at another facility who, with others, saw a UFO fly over his LCF during the spring 1967. 2) A retired colonel who was in the message center on March 16, 1967 when a message was sent to SAC headquarters about this incident and specifically mentioned the UFO sightings. 3) A retired colonel who relieved the Echo crew that morning and had also received a UFO report from security guards on a previous occasion. Air Force was never able to determine a cause for these events.

These are some of the salient facts of this incident. You can view some parts of the documents I mentioned at the following web site:
<http://www.tcet.unt.edu/~chrisl/cufon-pg.htm>

I am certainly willing to testify before a congressional committee about this incident - under oath.
