THE CSETI COMPREHENSIVE ASSESSMENT OF THE UFO/ETI PHENOMENON - MAY 1991

A comprehensive analysis of the UFO phenomenon, as well as original research and experiences of members of the CSETI CE-5 Initiative Working Group, has enabled us to make some specific conclusions about UFOs, extraterrestrial intelligence and their motives. The summation of this analysis, which follows, is intended to assist both groups and individuals in their efforts to understand this complex subject. We have recorded only those conclusions for which we have a high level of certainty.

GENERAL CONCLUSIONS

- Some UFOs are extraterrestrial spacecraft (ETS) which are piloted by extraterrestrial biological entities (EBEs) who originate on another planet, and most likely another star system.
- More than one extraterrestrial civilization is represented in the current activities involving earth.
- These extraterrestrial civilizations are working in concert and not competitively, although there is some specialization in function and activities for the various groups. This indicates that there exists an emerging or well established organization for these groups.
- These beings have bases within this solar system and may maintain temporary bases on earth, particularly under water.
- While various reports and speculations exist, we cannot at this time definitely state which planets or star systems are the home bases for these beings. Any specific information on this subject is very likely to be incorrect due to the security considerations of these beings. That is, given current human tendencies towards war, aggression and violence, open disclosure of their planets of origin would put these planets at potential risk should human military interests unravel the energy and propulsion technology of their craft.
- The variety in sizes and shapes of ETS observed is due to: a) varying civilizations of origin, and more importantly; b) specializations of functions, which include general reconnaissance, medical research and intelligence, earth environmental research, central command and base operations, energy generation and transfer, and human technology, military and space program research and reconnaissance.
- Sudden and fully open contact with human civilization has been avoided because of a number of interrelated factors, including:
 - a) The need to avoid an untimely disruption of earth civilization, including military, political, geopolitical, cultural, economic, technological and religious upheaval;
 - b) Risks to their own civilization and "people" as well as overall mission, given human xenophobia and tendencies towards violent armed reactions.
 - c) Up to this time, such massive and open contact has not been necessary, and has not been consonant with their overall long-term mission and purpose (see "The Question of Intent"), since their purpose is not acquisition-oriented or disruptive.
- A plan is in place to allow for gradually broader and deeper contact with human society and individuals so that humans may become accustomed to the reality of other intelligent beings in the universe, and so that needed research and observations

CSETI

The Center for the Study of Extraterrestrial Intelligence

may take place on both sides. Limited but increasing opportunities for bilateral and human-initiated contact will occur in the reasonably near future.

- Sudden and large scale contact will occur only in the event of a significant worldwide emergency (man-made or natural).

- While ETI observations and interaction with earth is probably an ancient as opposed to purely modern phenomenon, the marked increase in activity coinciding with World War II and the dawning of the "nuclear age" indicates that ETI are quite concerned about this transitional stage of human social evolution. They are particularly concerned about human nuclear weapons and technology, and potential threat to ETI, although this is nominal. These beings are further concerned with our peaceful transition to a world society, international peace, and the establishment of a just, effective and representative world government, expected to occur within 10 to 15 years or less.

- ETI technology is strictly guarded by both ETI and covert human agencies because of its potential for military applications which would greatly threaten world security. It is imperative that this technology not find significant human applications until such time as the earth attains international peace and an effective world government.

- The US government, at least at the level of a highly compartmentalized above top secret group, has known about the reality of these ETS and their occupants since at least 1946. A strict secrecy and a worldwide cover-up of these facts have been maintained due to:

- a) fear of public panic and social disruption;

- b) security issues surrounding possible military and technology applications of ETI technology, especially in the setting of a world beset with Cold War tensions and competing interests;

- c) uncertainty and mistrust regarding ETI motives and ultimate intentions;

- d) embarrassment and loss of face resulting from disclosures concerning how this matter has been handled, such as the harassment and ridicule of innocent civilians and military personnel, the withholding of information from the public and Congress, etc.

- The US government possesses several ETS and the deceased bodies of several EBEs. While there is evidence to strongly suggest that these agencies are attempting to reverse-engineer these craft, such efforts have not been functionally successful, although a number of secondary and partial "discoveries" have resulted from this research.

- The nature of "reality" of these craft and the beings has been incorrectly characterized by some as belonging to "another dimension or reality" from this dimension. Unfortunately, these statements are made without fully considering what "this reality" is. A more correct understanding is that the Full Spectrum of Reality is a singular, integrated one which may be perceived wholly or in its various aspects, such perception being entirely dependent on the level of consciousness of the perceiver. The various aspects of "dimensions" of this reality, which are limitless in number, are not restricted to or by time and space as we know it commonly. These beings and their craft belong to the same Reality as humans; however, their advancement in the realms of physical science and the

CSETI

The Center for the Study of Extraterrestrial Intelligence

science of consciousness have given them competence in a broader aspect of the Full Spectrum of Reality than is usually experienced by humans. The differences are not insurmountable, nor are they truly fundamental; in fact, they are relative and only temporary. While these beings are utilizing and experiencing a broader aspect of the Full Spectrum of Reality, so too can and will humans, for we are as "interdimensional" by nature as they...

- ETS energy and "propulsion" (or space transfer) systems utilize principles and laws of the physical universe not yet fully appreciated by human science, and include:
 - a) gravity/anti-gravity and electromagnetic/gravity technology;
 - b) space energy and so-called hyper-dimensional energy systems;
 - c) mater/energy interchangeable technologies; and
 - d) possible Consciousness Assisted Technology (CAT) and Technology Assisted Consciousness (TAC).
- Some if not all EBEs have advanced mental capabilities which include telepathy, precognition, remote viewing and others, indicating that they have developed the "science of consciousness" to a degree which parallels or surpasses their advanced physical technologies. Humans also possess these capabilities, but these remain largely undeveloped by most humans.
- EBEs are more developed or advanced than humans in a number of respects, but are not superior to humans as beings. Our point of unity and equality with EBEs is in

our mutual existence as conscious, intelligent beings.

- While these various EBEs may have values and priorities which are different from those of some 20th century humans, their motives and ultimate intentions are non-hostile and do not include the acquisition or subjugation of the earth or its peoples (see "The Question of Intent").
- The establishing of a lasting world peace and just and effective world government is essential to the long-term ETI/human relationship.

THE QUESTION OF INTENT

While not minimizing the strange and startling aspects of this phenomenon which some humans have experienced, our assessment of these visitors' motives and ultimate intentions is that they are decidedly non-hostile. Their primary operations and activities center around:

- General reconnaissance of earth and her societies
- Military (especially nuclear) observations and assessment
- Human social and psychological study and observation
- Observation and assessment of human mental and spiritual development
- Earth ecology research and documentation, including documentation of earth life systems, and mineral, plant and animal specimens
- Observation of human technology and technological developments
- Observation, active monitoring and, if necessary, limitation of human space programs, particularly those directed to-

CSETI

wards the nationalistic colonization of space

- Careful interaction with humans to convey certain information about themselves and to accustom humans to their presence.

Our assessment is that these activities are derived from several ultimate motives which include:

1. Pure study and research of a rapidly developing intelligent species (humans) during a time of transition to a world community.
2. A needed increase in ETI knowledge of world societies and human nature preparatory to future significant interaction, which will be mutual in nature, and which will eventually culminate in the introduction of earth civilization into an interplanetary network (this may require several centuries to complete).
3. Preparatory activities for continued readiness in the event that intervention is required during a major world emergency, such as a large-scale nuclear war. Such interventions would be in the form of:
 - a) interception and destruction of Intercontinental Ballistic Missiles (ICBMs);
 - b) alteration of missile coordinates and readiness; and
 - c) emergency earth-based activities when and where warranted.

The minimum intervention necessary would be used, with the intention being the preservation of earth as an inhabitable planet with adequate human resources remaining to sustain intelligent life here.

4. Emergency intervention in the event of an environmental or geological catastrophe of worldwide dimensions.

5. Preservation of earth species, including human genetic preservation and/or augmentation as a precaution in the event of a worse-case scenario (see above).
6. Protection of space from hostile or military utilization by human national interests.
7. ETI self-protective interests, insofar as humans have a strong recent history of coupling marked aggressiveness with rapid technological development; in this setting, monitoring and perhaps even limiting human capabilities may be important to ETI security — human evolution to world peace, non-aggression and world government would remove this motive as well as several of the motives listed above.
8. ETI short- and long-term goals related to the attainment of a significant human paradigm shift from one of fragmentation/separation to one of unity, to include the unity of science and religion, world political and eventual spiritual unity, and universal unity. This paradigm shift is dependent on the development of human consciousness, which is of particular interest to ETI; and
9. The preservation and advancement of intelligent life in the universe.
