>Subject: About [REDACTED]
>From: K [REDACTED] <[REDACTED]>
>To: [REDACTED] <[REDACTED]>

>Hi [REDACTED]

>I read an email you recently sent about a guy who died. He had some poems
>on his site that I read and was touched. I decided to email him and got
>this back. He mentions that [REDACTED] is for real and knows his stuff.
>Check it out:

>I went to www.cseti.org for a visit last week. I read every paper, and
>watched every video except whatever is in their members section.
>I guess you read that I am an electronic engineer. Tonight I was briefed on
>my next assignment. It is a newly patented hazardous environment suit, with
>new telemetry systems similar to those in NASA space rated suits and more.
>It is supposed to be able to regulate body temperature even in a fire. I am
>anxious to work on their project. I will be producing the demo animations
>for presentation to OSHA, and industry.

>We also seem to have a common interest in CSETI. Let me tell you how I got
>interested in what they have to say:

>I grew up as an artist, and I guess more of a hippie than a redneck. [the
>only two main choices in the 60's] When I graduated high school in 1972, I
>couldn't get in to college before I was threatened with the draft, and after
>basic testing, I was pressured to enlist in the Navy to avoid ground duty
>in the army. I was part of a special company recruited here in Dallas,
>called the "Texas Ranger Company" in August of 1972. We were sworn in on TV
>by Admiral Zumwalt, at the old Texas Rangers baseball stadium. He flew into
>the stadium on a cryogenic backpack, and they spent 3 days parading us
>around Dallas/Ft. Worth before we went to boot camp.

>I went to boot camp in San Diego California, and Gunnery Missile school at
>Great Lakes, outside Chicago. Just before my 19th birthday, I was sent to
>rendezvous and join MARHUK 23 [Marine Hunter Killer Squadron 23] operations
>aboard the USS DUBUQUE, LPD-8.

>I can tell you from firsthand experience that [REDACTED] is a real and
>competent authority on EMF and scalar weapon technology. There is a lot
>more that he doesn't mention, presumably because of respect for the military
>secrecy of it. There are a lot of details and missions I will probably
>never reveal. I don't know what will get me a visit from N.I.S., and I
>don't ever want to see them again.

>What [REDACTED] has written about there is not new, and was in full swing

>when I was on missions in and around VietNam from 1973-1975. We did all
>sorts of missions all over WESPAC
>[the Western Pacific]. I do not consider myself a war criminal, but I am
>sure the North VietCong do. I left the area for the last time right after
>we helped evacuate the American Embassy in the spring of 1975. [Operations
>Frequent Wind and Eagle Pull]

>
>My work was with Radar, Electronic Countermeasures and Electronic Warfare.
>For instance, I was one of the first operators of the MK-105 hydrofoil
>minesweeping sled. The ship I operated from was capable of EW, and radar
>mirage. I only mention things that I know for sure are now declassified.

>
>We did not have scalar weapons, but were aware of them. When the ship was
>underway, I stood radar watch in C.I.C. Just after my friends and I got
>relieved from the 2000 to 2400 hours radar watch, we went down to the flight
>deck to unwind. We were in the vicinity of Korea and the Russian Sakhalin
>missile base one night, and I think I saw the fireball from a scalar weapon
>being fired. The description given of these firings in Bright Skies matches
>very well what we saw. We reported this to the C.D.O. at C.I.C [Command
>Duty Officer at our ships' Combat Information Center]. He was interested,
>but not shocked at all, and told us not to worry about it. We asked him if
>we should write up a report to Washington. He said "don't you dare". He
>went back to work, but I didn't sleep well.

>
>As for aliens, I don't know anything about them. I believe that if they do
>exist, they may be visiting us. If they are, they haven't taken over yet.
>If they have the technology to travel here and remain so elusive, they
>probably could if that was their mission.

>
>I am certain that the military wouldn't be honest with citizens about them,
>whether they are here or not. I know that they will use any opportunity to
>scare up money and loss of rights when they can institute martial law. I
>was a regular visitor in the Philippines while [REDACTED] had martial
>law in effect. It ain't pretty, and I wouldn't want it here.

>
>What I would like is the disclosure of the information one way or the other.
>I doubt seriously that Dr. Greer will live to see that happen. At times I
>think the only reason he is still alive now is that he has made himself
>conspicuous, and they don't like conspicuous targets to end up as martyrs.
>He has obviously stepped on many toes. I think the only reason people like
>[REDACTED] is talking now is the same reason that [REDACTED] and others
>have...they think they have gotten too old to care about the threats from
>N.I.S, etc. I can tell you though, that if they tell someone to shut up,
>they should think about it long and hard. The military takes secrecy as
>serious as a heart attack.

>
>Hey, best of luck in your research. Let me know if there is something
>substantial revealed in the members section. I imagine it is more of the
>same information that is on the public section.

>
>Sincerely,

>[REDACTED]
>[REDACTED] or [REDACTED]
>www.[REDACTED] 22/
