Introduction

We are releasing this report in the attempt to reduce the imbalance of information available to those researchers involved in pursuing the facts surrounding crash retrievals. It is not our intent to dispute the research uncovered by other independent investigators. With so little access to the big picture, we must not assume that similar accounts necessarily refer to the same event. Some early researchers uncovered a crash case and assumed that other accounts of crashes must have been misidentifications of one specific event. After all, a logical argument would support the premise that any being technologically advanced enough to visit us from a different solar system would be invulnerable to such catastrophic miscalculation.

With this in mind, we would like to draw attention to some of the details conveyed by our witness that are remarkably similar to details in other accounts of UFO crashes. Firstly, the government file seen by our witness refers to many crashes; secondly, it describes a peculiar break in the porthole of the recovered craft. (This craft is the subject of our report.) The same type of break has been described in past reports about craft recovered from other locations.

There could be many reasons why such a specific description of the porthole break is a feature found in other UFO crash reports. It

is possible that publicly reported details from early retrievals were intentionally shuffled to protect the sources of the information. Additionally, the intelligence community may have contributed to this process. Whenever classified information surfaces, the pattern of the information released indicates the source of the leak; consequently, governments maintain effective control over this subject.

If many of the retrieved craft exhibited the same kind of pin-hole break, it could be the result of some defect in the porthole material; maybe it's the characteristic puncture inflicted by some exotic weapon of extraterrestrial war. Perhaps we will come to realize, in spite of the existence of technologically advanced beings, that achievement of perfection is an elusive standard everywhere.

We feel that this introduction would not be complete without adding that we strongly support other independent researchers that have expressed their dissatisfaction with official positions regarding the continued withholding of information about UFOs. This responsibility lies squarely on world leadership. Of their mismanagement of this and other aspects of world governing, we state: manipulation of the truth is a poor substitute for leadership and a weak strategy for the future survival of mankind. The only way we can forge ahead is to have clarity of purpose; the only way to attain this clarity is with a true vision of what we are, as a species, in relationship to the universe.

INTERVIEW WITH THE WITNESS

The interview took place with a witness who was a former military officer. While serving in the military he had a special security clearance that enabled him to access a restricted library (prior to 1970). Due to the highly sensitive nature of the information, and possible risk to this individual, no information is provided which could be used to identify him or the location of the base. The following conversation is not written down verbatim, but was compiled over the course of four separate sessions.

Chuck: What was the occasion in which you viewed documents concerning crashed saucers?

Witness: While I was stationed at this particular base, I had a special assignment which afforded me ample free time. The materials library was available to those officers with a designated security clearance, and I had the appropriate clearance. I was passing time in the library and I discovered a file on the subject of alien craft and its dead occupants that had been retrieved. The file contained a report, a separate black and white photograph and a book by Major Donald Keyhoe.

Chuck: Did the file or any of the documents within the file have a classification stamped on them such as "Classified" or "Top Secret"?

Witness: No. They were just in the (military) base library; but you

needed to have the proper clearance to be admitted.

Chuck: Before you saw the file, did you ever have any experience with UFOs--any personal sightings?

Witness: No, not at all.

Chuck: Were you asked or required to look at this material in the library at any time?

Witness: No.

Chuck: So you don't think some kind of test was being conducted, with you as the subject?

Witness: No, I was alone when I viewed the file. I was actually looking for something else at the time.

Chuck: So you came across this file by accident?

Witness: Yes.

Chuck: What did you see in the photograph?

Witness: There was a perfectly intact, circular shaped craft and it was lying somewhat tilted to one side on the ground in the desert. There did not appear to be a crater or other ground-surface disturbance in the photograph that would indicate a crash, but I could not tell for sure.

Chuck: Could you describe the angle in which the craft appeared tilted as it lay on the ground?

Witness: I would estimate that it was tilted from about five to ten degrees.

Chuck: Did the top view of the craft form a perfect circle?

Witness: I couldn't tell...the photograph showed the craft from the side, as if somebody on the ground had taken the picture some distance away. But it was referred to as a saucer shape.

Chuck: Was there any mention of radiation associated with this craft?

Witness: It wasn't indicated.

Chuck: So you say that the craft was intact--no damage anywhere?

Witness: Well, the report referred to this particular craft in much greater detail. This just reinforced what I was seeing in the photograph, but they also elaborated on many details not evident in viewing the picture. First of all, it was stated that the craft was retrieved somewhere near the town of Farmington, New Mexico, prior to 1950. As I could see in the photograph, the material of which the craft was composed was metallic, and resembled brushed aluminum--the report noted this also.

Chuck: Were there any fin-like projections noticed on this craft?

Witness: No, none at all.

Chuck: Was there any mention that this structure was reminiscent of a gyro; in other words, did the exterior of the craft rotate around the cockpit?

Witness: There was nothing indicated about that.

Chuck: Could you make out any identifying markings or symbols on the craft as it appeared in the photograph?

Witness: No...and there was nothing mentioned about it.

Chuck: Were there any surface features on the craft at all?

Witness: It was stated in the report that there were portholes on the cabin part of the craft, but they were not made of any type of glass. Also, I couldn't make out this feature in the photograph.

Chuck: Did the information reveal what that material could have been?

Witness: Well, this porthole had a puncture that was the diameter of a pencil; that was the only defect discovered on the entire ship. Our people tried diamond drills, an acetylene torch--everything they could come up with on the porthole where this opening was located, but nothing would break through it. They couldn't enlarge the hole, either; the material was tougher than anything we were familiar with on Earth. But they eventually got into the cabin.

Chuck: Did it say how they accessed it?

Witness: Yes, it was described as a chance opening. They had gone over the outside of the craft and could not even find a seam or crack that might indicate the location of a door or other entrance.

This led them to focus on the small opening in the porthole. As I mentioned earlier they used everything they could think of to enlarge this hole...and nothing worked. It was concluded that they would have to somehow gain access through this hole and they eventually did because a door popped open; it appeared from a place where there were no obvious seams or other indications of a door. The report said (referring to the opening and closing of the door) that it was "almost as if the material of the craft had liquified and then solidified again," leaving no clue of the door's location upon closing. If there was a seam, it was so tight it couldn't be observed.

Chuck: Did you ever see the movie The Day The Earth Stood Still? It sounds like a scene from the movie, where they show the military trying a blowtorch on a spaceship, but with no luck.

Witness: No, I never saw the movie.

Chuck: Did the report in the file indicate the size of this craft?

Witness: My recollection is that it was around thirty-some feet in diameter.

Chuck: Was there anything in the report that indicated the weight of the craft?

Witness: Yes, it was apparently composed of a very light weight material. The report stated that two average men could lift or move the entire ship!

Chuck: Did you ever see anything about the ability of these ships to become invisible, like the cloaking idea presented on "Star Trek"?

Witness: It was indicated that there was no way of telling whether they got out of sight so fast that your eyes couldn't follow them, or if they actually had cloaking or light-bending ability.

Chuck: I am especially interested in what these dead occupants were like. Were they described as biological extraterrestrials?

Witness: They didn't use that terminology that I can remember, but yes, they were described as being like us, but smaller--two arms, two legs, a head, feet and hands.

Chuck: Were they all alike in appearance?

Witness: Well, it said that the two bodies were badly charred. So was the interior of the cockpit of the craft. The report also said that they were about four feet in height; there was no description of their features beyond that.

Chuck: So there was no mention of sexual difference?

Witness: No, no mention of that. But it's interesting that the report said that the clothing wasn't burned at all.

Chuck: So there was a description of the fabric?

Witness: Yes, it was some type of woven fabric and the report said that it had a tensile strength of 800 pounds.

Chuck: Was the color of the fabric mentioned?

Witness: No, there was no reference to it.

Chuck: How about the style of the clothing? Did they both wear the same thing?

Witness: It was only described as being like a one-piece flight suit. And yes, it was the same on each one.

Chuck: Was there any mention of craft propulsion systems? For example, anything involving jet, nuclear, or anti-matter driven engines?

Witness: There was no mention of a propulsion system other than the idea that their technology utilized magnetic or gravitational fields of the planets to travel in space. It was speculated that they were able to cross greater distances of space within a much shorter time than we thought possible. For instance, based on our present day

technology, it would take us years to get very far in space; to the them, it would only be a matter of days, or even hours.

Chuck: How could the military figure this out?

Witness: The report didn't go into depth on this, but part of the conclusion was based upon the fact that there was no food or bathroom facility found within the cabin of the craft.

Chuck: Was there anything in the report that indicated the reason for the craft coming down? For example, there have been rumored reports that our military was under orders to intercept and shoot them down. Is it possible that we shot this one down?

Witness: No, according to the report we were not responsible for bringing this craft or any of the other ones down. There was mention of a magnetic fault, or opening, or something like that, located in the area where the craft came down. There were three of these faults or openings located in North America: one was located in the Southwest, around the Texas/New Mexico area, one was somewhere in the Carolinas, and one was somewhere in the Northeast sector, but I can't remember exactly where.

Chuck: You mentioned "or any of the other ones?" Are you saying that there was more than one crash?

Witness: Yes, the report referred to "crashes" and the Farmington crash information was used to relate general information on similarities with other crashes.

Chuck: Are you saying that these aliens are not able to control their

craft in certain areas?

Witness: From the report, I learned that these areas occur naturally and could possibly interfere with the navigation of these craft. You see, the way I understand it, they use the natural magnetic lines of a planet and a gravity field to move their ships from one place to another. That's how they are able to make near-right angle turns, which our jets are incapable of doing. They can fly circles around any of our aircraft.

Chuck: Was there anything in the report that suggested where the craft and the little beings originated, or why they are coming here?

Witness: No, nothing in the report as to "why" or "from where." But the report did say that hundreds of alien craft flew over the town of Farmington, New Mexico, on the anniversary of this crash--that also corresponded with the celebration of some national holiday. And it said that it may have been a tribute to the beings that were killed, or they were letting us know, by a show of force, they had overcome the factor that had caused their ships to crash.

Chuck: How did the military report specifically refer to it? For instance, was it described as "a tribute to their fallen comrades"?

Witness: They didn't use the term "comrades"...actually, there was some specific terminology used but I can't recall what it was.

(Note: Chuck speculated that whatever the word was that referred to the dead beings, it may have some important significance indicating our military's awareness of the relationships or order within the

alien culture.)

Chuck: Why do you feel that the military or the government is withholding this information from the public?

Witness: They felt that only people in professional levels were capable of dealing with this information. Based on what occurred with the Orson Welles "War of the Worlds" radio presentation, this information could create panic. Then it threatens to break down the industrial complex that supports the military complex--it would obviously undermine it. And it could possibly reduce our ability to counter an attack by a hostile alien culture. But it was also clear that the intent of these particular beings was not known. While our technicians worked on the craft out in the desert (trying to gain access) other alien ships would, from time to time, fly by the site, pausing momentarily to view the scene, perhaps to see if there were any survivors. At no time did they attempt to harm our people.

Chuck: Do you have any other comments you would like to make about this?

Witness: I think I've covered everything. All the information on this subject was removed from the library in the late 1960s. One thing I can say is that I would sure like to know what's going on now.

Report on the Crash at Farmington

Report on the Crash at Farmington

The following diagrams demonstrate a hypothetical analysis of random probings to gain access to the mechanism controlling the cabin entrance door; this method uses a thin, rigid metal rod, maneuvered through a pencil-sized opening in a porthole.

AZTEC CRASH

Estimated Dimensions of Aztec Saucer Cabin:

Diagram A

FARMINGTON CRASH

Estimated Dimensions of Farmington Saucer Cabin (based on diagram identified by witness):

Diagram B

The following factors were used as a basis to formulate the measurements shown in the documents:

- o Cabin floor levels and location of portholes are based on height of reported occupants (36" to 48" high.)
- o Thickness of porthole material combined with the relatively small diameter of the broken area and the angle of penetration of the break itself would restrict the play of any object used to probe inside cabin. (See diagram C.)
- o The scale used to formulate diagrams A and B was 9/32 in. = 1 ft.

Conclusion

Traversing a six-foot diameter cabin would afford one greater control and accessibility; the far side of the cabin's interior would be easily reached. In contrast, attempting to probe inside a larger, eighteen-foot diameter cabin using a long, pencil-thin metal rod would be extremely difficult.

REFERENCES

We include a book list because we are concerned that much of this literature has been passed over by present-day researchers. Some of the accounts contained here have long been discredited, and are sadly ignored. We initially avoided much of the older material ourselves, and would not have bothered with it if we did not have the information divulged to us by our witness (to the military file). This is further significant because we first became acquainted with this person over an entirely different subject of interest and it was an offhand remark about UFOs that led him to reveal his story.

Ruppelt, Edward J. The Report on Unidentified Flying Objects.
Garden City, New York: Doubleday & Company, Inc., 1956.

In this book, we found a corroborative reference to the incident in Farmington, New Mexico.

Keyhoe, Major Donald E. The Flying Saucers Are Real.
New York, N.Y.: Fawcett Publication, Inc., 1950.

Here, we found a brief account of the Farmington incident. We also read about Keyhoe's trip to Denver, Colorado, to check on the story about the "little men"; he was convinced it was a hoax.

Berlitz, Charles and Moore, William L. The Roswell Incident.
New York, N.Y.: Berkley Publishing Corporation, 1980.

The authors suggest that the Scully story may not have been the perpetration of a hoax after all.

Edwards, Frank. Flying Saucers - Serious Business.
New York, N.Y.: Lyle Stuart, Inc., 1966.

A very informative book; areas of interest to us include the chapter entitled "Pick Up the Pieces" which features accounts about Wilbert B. Smith.

Scully, Frank. Behind the Flying Saucers.
New York, N.Y.: Henry Holt and Company, 1950.

New evidence indicates that he was telling the truth about the crashes of disks and the recovery of the bodies. The story told here is an amazing corroboration of details that were revealed by our witness to the file; he has never heard of Scully or his book.

Steinman, William S., Stevens, Wendelle C. UFO Crash At Aztec.
Tucson, AZ: UFO Photo Archives, 1986.

This is an extensive and impressive work that substantiates Scully's claims from 1950. We feel that Mr. Steinman demonstrates a singular determination and courage that is rarely seen in UFO research. His personal interview with Dr. Sarbacher, confirming Scully's story, is key.

Stringfield, Leonard H. Retrievals Of The Third Kind, 1978, The UFO Crash Retrieval Syndrome, 1980, UFO Crash Retrievals: Amassing The Evidence, 1982, UFO Crash Retrievals: Is The Coverup Lid Lifting, 1989. Cincinnati, Ohio.

We feel that Leonard Stringfield's series of status reports have been an immense contribution to UFO research for more than a decade--without this ongoing and regularly updated grounding in the physical aspect of the UFO phenomenon, many researchers may have become totally lost in the paranormal hypothesis. Mr. Stringfield has demonstrated great tenacity and tireless dedication, persisting in his investigations despite the barrage of disinformation that discourages (and even frightens) other would-be researchers. We express our gratitude to him for his relentless quest to uncover the truth.
