

5 February 1995

Dear Mr. Rockefeller,

CSETI has received your kind donation to our research efforts, and I would like to express to you our sincere gratitude and deep appreciation. This gift will enable us to move a step further into establishing and documenting the emerging, embryonic relationship between humanity and extraterrestrial life forms.

The gathering of evidence is going forth in quantum leaps, and we are on the trail of some very promising material. I have spoken to an English film producer who has just acquired 150 minutes of film from the 1947 crash of an ET craft, and detailed segments of the autopsy of the ET lifeform. He has tentatively agreed to show these materials to a team of medical and scientific experts which I have assembled, which would include both M.D. s and aerospace scientists. If we can firm up a date on this would you or George wish to be present at the viewing?

We have identified a couple of dozen high level witnesses who have had first hand exposure to the ET bodies and hardware. It is clear that for most of these, we will need to obtain an executive order of amnesty from the President so that they can testify free of fear of prosecution for violation of their national security oaths. We are evolving a plan to achieve this ASAP; if you have ideas or suggestions of how to best achieve this, please let us know at your earliest convenience.

I trust that George and Bootsie are keeping you informed of our general progress, so I will not reiterate those developments here. It is our goal to complete the gathering of evidence and witness testimony by mid summer, and to begin various briefings in the fall. We have learned of a parallel effort to effect an announcement by partisan US interests (in part involving the Republican party chairman), and we can only hope that if they preempt our efforts, that they will not politicize this subject, or spin it in a militaristic direction. God willing, wisdom will prevail!

Wishing you and your wonderful wife the best of all worlds, and with heartfelt gratitude,

Steven M. Greer M.D.
Director of CSETI
