Re: More on HAARP

*File
HAARP*

Here's the rest of the article from Nexus Magazine:

HAARP HISTORY

The patents described below were the package of ideas which were originally controlled by ARCO Power Technologies Incorporated (APTI), a subsidiary of Atlantic Richfield Company, one of the biggest oil companies in the world. APTI was the contractor that built the HAARP facility. ARCO sold this subsidiary, the patents and the second phase construction contract to E-Systems in June 1994.

E-Systems is one of the biggest intelligence contractors in the world, doing work for the CIA, defence intelligence organisations and others. US\$1.8 billion of their annual sales are to these organisations, with \$800 million for black projects-projects so secret that even the United States Congress isn't told how the money is being spent.

E-Systems was bought out by Raytheon which is one of the largest defence contractors in the world. In 1994 Raytheon was listed as number 42 on the "Fortune 500" list of companies. Raytheon has thousands of patents, some of which will be valuable in the HAARP project. Twelve patents are the backbone of the HAARP project, and are now buried among the thousands of others held in the name of Raytheon.

Bernard J. Eastlund's US Patent #4,686,605, "Method and Apparatus for Altering a Region in the Earth's Atmosphere, Ionosphere and/or Magnetosphere", was sealed for a year under a government secrecy order.

The Eastlund ionospheric heater was different: the radio frequency (RF) radiation was concentrated and focused to a point in the ionosphere. This difference throws an unprecedented amount of energy into the ionosphere. The Eastlund device would allow a concentration of one watt per cubic centimetre, compared to others only able to deliver about one millionth of one watt.

This huge difference could lift and change the ionosphere in the ways necessary to create futuristic effects described in the patent. According to the patent, the work of Nikola Tesla in the early 1900s formed the basis of the research.

What would this technology be worth to ARCO, the owner of the patents? They could make enormous profits by beaming electrical power, without wires, from a powerhouse in the gas fields to the consumer.

For a time, HAARP researchers could not prove that this was one of the intended uses for HAARP. In April 1995, however, Begich found other patents, connected with a 'key personnel' list for APTI. Some of these new APTI patents were indeed a wireless system for sending electrical power.

Eastlund's patent said the technology can confuse or completely disrupt airplanes' and missiles' sophisticated guidance systems. Further, this ability to spray large areas of Earth with electromagnetic waves of varying frequencies, and to control changes in those waves, makes it possible to knock out communications on land or sea as well as in the air. The patent said:

"Thus, this invention provides the ability to put unprecedented amounts of power in the Earth's atmosphere at strategic locations and to maintain the power injection level, particularly if random pulsing is employed, in a manner far more precise and better controlled than heretofore accomplished by the prior art, particularly by detonation of nuclear devices of various yields at various altitudes...

"...it is possible not only to interfere with third party communications but to take advantage of one or more such beams to carry out a communications network even though the rest of the world's communications are disrupted. Put another way, what is used to disrupt another's communications can be employed by one knowledgeable of this invention as a communication network at the same time.

"...large regions of the atmosphere could be lifted to an unexpectedly high altitude so that missiles encounter unexpected and unplanned drag forces

with resultant destruction...

"Weather modification is possible by, for example, altering upper atmosphere wind patterns by constructing one or more plumes of atmospheric particles which will act as a lens or focusing device. ...molecular modifications of the atmosphere can take place so that positive environmental effects can be achieved. Besides actually changing the molecular composition of an atmospheric region, a particular molecule or molecules can be chosen for increased presence. For example, ozone, nitrogen, etc. concentrations in the atmosphere could be artificially increased..."

Begich found 11 other APTI patents. They told how to make "Nuclear-sized Explosions without Radiation", power-beaming systems, over-the-horizon radar, detection systems for missiles carrying nuclear warheads, electromagnetic pulses previously produced by thermonuclear weapons and other "Star Wars" tricks. This cluster of patents underlay the HAARP weapon system.

Related research by Begich and Manning uncovered bizarre schemes. For example, US Air Force documents revealed that a system had been developed for manipulating and disrupting human mental processes through pulsed radio-frequency radiation (the stuff of HAARP) over large geographical areas. The most telling material about this technology came from writings of Zbigniew Brzezinski (former National Security Adviser to US President Carter) and J. F. MacDonald (science adviser to US President Johnson and a Professor of Geophysics at UCLA), as they wrote about use of power-beaming transmitters for geophysical and environmental warfare. The documents showed how these effects might be caused, and the negative effects on human health and thinking.

The mental-disruption possibilities for HAARP are the most disturbing. More than 40 pages of the book, with dozens of footnotes, chronicle the work of Harvard professors, military planners and scientists as they plan and test this use of the electromagnetic technology. For example, one of the papers describing this use was from the International Red Cross in Geneva. It even gave the frequency ranges where these effects could occur-the same ranges which HAARP is capable of broadcasting.

The following statement was made more than 25 years ago in a book which

Brzezinski wrote while a professor at Columbia University:

"Political strategists are tempted to exploit research on the brain and human behaviour. Geophysicist Gordon J. F. MacDonald-specialist in problems of warfare-says accurately-timed, artificially-excited electronic strokes 'could lead to a pattern of oscillations that produce relatively high power levels over certain regions of the Earth... In this way, one could develop a system that would seriously impair the brain performance of very large populations in selected regions over an extended period...' No matter how deeply disturbing the thought of using the environment to manipulate behaviour for national advantages, to some the technology permitting such use will very probably develop within the next few decades."

In 1966, MacDonald was a member of the President's Science Advisory Committee and later a member of the President's Council on Environmental Quality. He published papers on the use of environmental control technologies for military purposes. The most profound comment he made as a geophysicist was:

"The key to geophysical warfare is the identification of environmental instabilities to which the addition of a small amount of energy would release vastly greater amounts of energy."

While yesterday's geophysicists predicted today's advances, are HAARP program managers delivering on the vision? The geophysicists recognised that adding energy to the environmental soup could have large effects. However, humankind has already added substantial amounts of electromagnetic energy into our environment without understanding what might constitute critical mass. The book by Begich and Manning raises questions. Have these additions been without effect, or is there a cumulative amount beyond which irreparable damage can be done? Is HAARP another step in a journey from which we cannot turn back? Are we about to embark on another energy experiment which unleashes another set of demons from Pandora's box?

As early as 1970, Zbigniew Brzezinski predicted a "more controlled and directed society" would gradually appear, linked to technology. This society would be dominated by an elite group which impresses voters by allegedly superior scientific know-how. Angels Don't Play This HAARP further quotes Brzezinski:

"Unhindered by the restraints of traditional liberal values, this elite would not hesitate to achieve its political ends by using the latest modern techniques for influencing public behaviour and keeping society under close surveillance and control. Technical and scientific momentum would then feed on the situation it exploits," Brzezinski predicted.

His forecasts proved accurate. Today, a number of new tools for the "elite" are emerging, and the temptation to use them increases steadily. The policies to permit the tools to be used are already in place. How could the United States be changed, bit by bit, into the predicted highly-controlled technosociety? Among the 'stepping stones' Brzezinski expected were persisting social crises and use of the mass media to gain the public's confidence.

In another document prepared by the government, the US Air Force claims:

"The potential applications of artificial electromagnetic fields are wide-ranging and can be used in many military or quasi-military situations... Some of these potential uses include dealing with terrorist groups, crowd control, controlling breaches of security at military installations, and antipersonnel techniques in tactical warfare. In all of these cases the EM (electromagnetic) systems would be used to produce mild to severe physiological disruption or perceptual distortion or disorientation. In addition, the ability of individuals to function could be degraded to such a point that they would be combat-ineffective. Another advantage of electromagnetic systems is that they can provide coverage over large areas with a single system. They are silent, and countermeasures to them may be difficult to develop... One last area where electromagnetic radiation may prove of some value is in enhancing abilities of individuals for anomalous phenomena."

Do these comments point to uses already somewhat developed? The author of the government report refers to an earlier Air Force document about the uses of radio-frequency radiation in combat situations. (Here, Begich and Manning note that HAARP is the most versatile and the largest radio-frequency radiation transmitter in the world.)

The United States congressional record deals with the use of HAARP for

penetrating the Earth with signals bounced off the ionosphere. These signals are used to look inside the planet to a depth of many kilometres in order to locate underground munitions, minerals and tunnels. For 1996 the US Senate has set aside US\$15 million to develop this ability alone: Earth-penetrating tomography. The problem is that the frequency needed for Earth-penetrating radiations is within the frequency range most cited for disruption of human mental functions. It may also have profound effects on migration patterns of fish and wild animals which rely on an undisturbed energy field to find their routes.

As if electromagnetic pulses in the sky and mental disruption were not enough, Eastlund bragged that the super-powerful ionospheric heater could control weather. Begich and Manning brought to light government documents indicating that the military has weather-control technology. When HAARP is eventually built to its full power level, it could create weather effects over entire hemispheres. If one government experiments with the world's weather patterns, what is done in one place will impact everyone else on the planet. Angels Don't Play This HAARP explains a principle behind some of Nikola Tesla's inventions-resonance-which affects planetary systems.

FORTY YEARS OF ZAPPING THE SKY?

As far back as 1958, the chief White House adviser on weather modification, Captain Howard T. Orville, said the US defence department was studying "ways to manipulate the charges of the Earth and sky and so affect the weather by using an electronic beam to ionise or de-ionise the atmosphere over a given area.

In 1966, Professor Gordon J. F. MacDonald was Associate Director of the Institute of Geophysics and Planetary Physics at the University of California, Los Angeles, was a member of the President's Science Advisory Committee, and later a member of the President's Council on Environmental Quality. He published papers on the use of environmental control technologies for military purposes. MacDonald made a revealing comment:

"The key to geophysical warfare is the identification of environmental

instabilities to which the addition of a small amount of energy would release vastly greater amounts of energy."

World-recognised scientist MacDonald had a number of ideas for using the environment as a weapon system and he contributed to what was, at the time,

the dream of a futurist. When he wrote his chapter, "How to Wreck the Environment", for the book Unless Peace Comes, he was not kidding around.

In it he describes the use of weather manipulation, climate modification, polar ice-cap melting or destabilisation, ozone depletion techniques, earthquake engineering, ocean wave control and brainwave manipulation using

the planet's energy fields. He also said that these types of weapons would

be developed and, when used, would be virtually undetectable by their victims. Is HAARP that weapon? The military's intention to do environmental engineering is well-documented.

US Congress's subcommittee hearings on Oceans and International Environment

looked into military weather and climate modification conducted in the

early 1970s. "What emerged was an awesome picture of far-ranging research

and experimentation by the Department of Defense into ways environmental

tampering could be used as a weapon," said another author cited in Angels

Don't Play This HAARP.

The revealed secrets surprised legislators. Would an inquiry into the state

of the art of electromagnetic manipulation surprise lawmakers today?

They

may find out that technologies developed out of the HAARP experiments in

Alaska could deliver on Gordon MacDonald's vision, because leading-edge

scientists are describing global weather as not only air pressure and thermal systems but also as an electrical system.

SMALL INPUT, BIG EFFECT

HAARP zaps the ionosphere where it is relatively unstable. A point to remember is that the ionosphere is an active electrical shield protecting

the planet from the constant bombardment of high-energy particles from

space. This conducting plasma, along with Earth's magnetic field, traps the

electrical plasma of space and holds it back from going directly to the

Earth's surface, says Charles Yost of Dynamic Systems, Leicester, North

Carolina:

"If the ionosphere is greatly disturbed, the atmosphere below is subsequently disturbed."

Another scientist interviewed said there is a super-powerful electrical connection between the ionosphere and the part of the atmosphere where our weather comes onstage: the lower atmosphere.

One manmade electrical effect-power-line harmonic resonance-causes fallout of charged particles from the Van Allen (radiation) belts, and the falling ions cause ice crystals (which precipitate rain clouds).

What about HAARP? Energy blasted upward from an ionospheric heater is not much compared to the total in the ionosphere, but HAARP documents admit that thousandfold greater amounts of energy can be released in the ionosphere than injected. As with MacDonald's "key to geophysical warfare", "nonlinear" effects (described in the literature about the ionospheric heater) mean small input and large output.

Astrophysicist Adam Trombly told Manning that an acupuncture model is one way to look at the possible effect of multi-gigawatt pulsing of the ionosphere. If HAARP hits certain points, those parts of the ionosphere could react in surprising ways.

Smaller ionospheric heaters such as the one at Arecibo are underneath relatively placid regions of the ionosphere compared to the dynamic movements nearer Earth's magnetic poles. That adds another uncertainty to HAARP: the unpredictable and lively upper atmosphere near the North Pole.

HAARP experimenters do not impress common-sense Alaskans such as Barbara Zickuhr, who says: "They're like boys playing with a sharp stick, finding a sleeping bear and poking it in the butt to see what's going to happen."

COULD THEY SHORT-CIRCUIT THE EARTH?

Earth as a spherical electrical system is a fairly well-accepted model.

However, those experimenters who want to make unnatural power connections between parts of this system might not be thinking of possible consequences. Electrical motors and generators can be caused to wobble when their circuits are affected. Could human activities cause a significant change in a planet's electrical circuit or electrical field? A paper in the

respected journal Science deals with manmade ionisation from radioactive material, but perhaps it could also be studied with HAARP-type skybusters in mind:

"For example, while changes in the Earth's electric field resulting from a solar flare modulating conductivity may have only a barely detectable effect on meteorology, the situation may be different in regard to electric field changes caused by manmade ionisation..."

Meteorology, of course, is the study of the atmosphere and weather. Ionisation is what happens when a higher level of power is zapped into atoms and knocks electrons off the atoms. The resulting charged particles are the stuff of HAARP. "One look at the weather should tell us that we are on the wrong path," says Paul Schaefer, commenting on HAARP-type technologies.

ANGELS DON'T PLAY THIS HAARP

Angels Don't Play This HAARP: Advances in Tesla Technology is about the military's plan to manipulate that which belongs to the world: the ionosphere. The arrogance of the United States Government in this is not without precedent. Atmospheric nuclear tests had similar goals. More recently, China and France put their people's money to destructive use in underground nuclear tests. It was recently reported that the US Government spent US\$3 trillion on its nuclear program since its beginnings in the 1940s. What new breakthroughs in life science could have been made with all the money spent on death?

Begich, Manning, Roderick and others believe that democracies need to be founded on openness rather than the secrecy which surrounds so much military science. Knowledge used in developing revolutionary weapons could be used for healing and helping mankind. Because they are used in new weapons, discoveries are classified and suppressed. When they do appear in the work of other independent scientists, the new ideas are often frustrated or ridiculed, while military research laboratories continue to build their new machines for the killing fields.

However, the book by Manning and Begich gives hope that the military-industrial-academic-bureaucratic Goliath can be affected by the combined power of determined individuals and the alternative press. Becoming informed is the first step to empowerment.
