BARCELONA PROJECT
RADIOGRAPHIC EVALUATION

EXTREMELY TINY PROPORTIONATE SHORTENING
[NO EVIDENCE OF RHIZO/MESO/ACROMELIA]

CALCULATED BONE AGE [FROM KNEE EPIPHYSEAL STANDARDS]
ABOUT 6-8 YEARS

SKULL

APPARENTLY POST MORTEM (PM) CRUSHED SKULL
CORONAL SUTURE SYNOSTOSIS [?]; TURRENCEPHALY
MILD/MODERATE MIDFACE HYPOPLASIA
LOSS OF MANDIBULAR ANGLE
AT LEAST 1 TOOTH NOTED IN MANDIBLE [? PM LOSS]

SPINE

NORMAL [INTACT BUT SMALL STRUCTURES]
N'L INTERPEDICULATE WIDENING [L1-L5]

THORAX

10 RIBS

NARROW THORAX WITH OTHERWISE NORMAL RIBS

ELONGATED CLAVICLES [PM FRACTURE]

N'L SCAPULA

PELVIS

FLAT ACETABULAR ROOF

OTHERWISE N'L ILEUM/ISCHIUM

PUBIS NOT WELL SEEN[? UNOSSIFIED]

EXTREMITIES

ALL LONG BONE DIAPHYSES ARE PROPORTIONATELY VERY SHORT BUT NORMALLY FORMED

FEMUR

CAPITAL FEMORAL EPIPHYSES NOT WELL SEEN [PROBABLY NORMAL]

DISTAL EPIPHYSES N'L [PM FRACTURE THRU GROWTHPLATE WITH RESULTANT WIDENING]

TIBIA

N'L PROXIMAL & DISTAL EPIPHYSES

FIBULA

N'L/EXPECTED PROPORTIONATE LENGTH

HUMERUS

N'L PROXIMAL EPIPHYSIS

NO ELBOW DISLOCATIONS

RADIUS/ULNA

NORMAL INCLUDING AT LEAST 1 ULNA EPIPHYSIS

HANDS

RELATIVELY N'L PROPORTIONATELY SHORT HANDS

CARPALS NOT WELL SEEN BUT CARPAL SPACE IS NORMAL

N'L NUMBER OF METACARPALS/PHALANGES

RADIOGRAPHIC IMPRESSION/CONCLUSIONS:

AN UNBELIEVABLY TINY PROBABLE 6-8 YEAR OLD WITH PROPORTIONATE SHORTENING
NO EVIDENCE OF EPIPHYSEAL/METAPHYSEAL/DIAPHYSEAL DYSPLASIA WITHOUT ANY SPINE
CHANGES

POSSIBLE CRANIAL SUTURE ABNORMALITY & DYSMORPHISM

DOES NOT APPEAR TO REPRESENT A SKELETAL DYSPLASIA

SOME THOUGHTS:

IF SUTURAL CLOSURE IS REAL SUGGESTS POSSIBLE FGFR [2, 3] MUTATION

LOSS OF MANDIBULAR ANGLE SUGGESTS PYCNODYSTOSIS [CATHEPSIN GENE]; NO OTHER FINDINGS IN THIS CASE

10 RIBS SUGGEST CHROMOSOMAL SYNDROME [IE TRISOMIES ETC]

COULD THIS BE ADVANCED BONE AGE IN MUCH YOUNGER INDIVIDUAL SUGGESTING A
PROGEROID OR OTHER SYNDROME?

I REALLY DOUBT THAT.

I THINK THE MONEY IS ON SOMETHING NEW BUT THE CLOSEST KNOWN ENTITY IS SOME
FORM OF OSTEODYSPLASTIC DYSPLASIA

MOPD 1

RNU4ATAC GENE ENCODING SMALL NUCLEAR RNA[sn RNA] COMPONENT OF U12 DEPENDENT
SPLICEOSOME ON CHR 2q14.2

MOPD 2

PCNT GENE CHR 21q22

NOTE: 1 CASE-7 INCHES AT BIRTH; 20 INCHES AT 12 YEARS

*MOPD 3 [CAROLINE CARACHI TYPE]

BUT, NO KNOWN GENE
