Subject: RE: DNA results on Atacama Humanoid

Dear [REDACTED]

Many thanks for the introduction. We have completed a second sequencing of the genome. There is little more than what I have previously provided... and some things that are at odds with the first findings (such as the matrilineal haplotype –or “mother” of the specimen). There are other mutations that a “strange”.

But... please do not interpret that as meaning it is “not human”. Nothing I have ever said so far has indicated that. But, as I promised to Dr. Greer (and implicitly to you) I would not “conclude” anything until final analysis is done. The news media as quoted me as saying any number of things, or misquoted me more often than not.

I know it’s frustrating, but to give you an idea of the complexity... say you owned a library filled with 100,000 books... each with 100 pages. And someone took all those books and broke them up into individual sentences. My job is now to reconstruct the library accurately—every book, every meaning—from just that pile of billions of sentences.

So far we have found mutations that can potentially explain the bone structure. But that’s all we have—hints. There are now 5 expert geneticists working on the sequence—people with considerable expertise. I will in fact be meeting with my colleagues this Friday afternoon for an update on the progress.

I still think the prevailing evidence of the DNA is that it is human so far. But... to give you some hope... there are many ways I can think of that a sufficiently advanced civilization could “construct” a body out of “local parts”. So, the answer might not be in the DNA at all... and will rely on finding something living...

Be assured that I will update you/Steven/Emily first before anything major is discussed with outside parties.

Best,
[REDACTED]

Subject: DNA results on Atacama Humanoid

Dear [REDACTED]

I would like to introduce you to [REDACTED] (copied here) who so graciously let Steven examine the Atacama Humanoid.

He was asking for more information about the DNA results. I know you are extremely busy and yesterday I told him : "Tomorrow I will introduce you to [REDACTED] via e-mail and you can ask him the questions you have re the DNA results. The DNA testing is by no means finished, but is long, complicated and expensive. His preliminary report is on our website at [\[REDACTED\]](#) He has not written a formal report beyond that one. Some of the early findings were picked up by members of the media who did not understand the complexity or the subtlety of what was being discussed."

If you have more to add please let him know . I would appreciate it if you would copy me on the e-mails.

Much appreciated. All the best for the upcoming holidays.
