

CONFIDENTIAL

Sir, per your letter (see enclosure A), I would be happy to share with you the information as to how I came to possess a copy of the "Snowbird" document (see enclosure B).

I was given (this is but one page of an 8 or 9 page) the document for the EXPRESS purpose of sharing a copy of it with Mr. John Andrews, for him to attempt to authenticate. I have not seen the other pages, though I did see this page before it had been censored and I believe one of the censored out code names is "Aquarius".

Mr. John Andrews (a good friend of mine) is an expert on the developmental history of the U-2 (see enclosure C), the A-12/YF-12/D-21/SR-71 (see enclosure C1), and now the USAF Lockheed(?) F-19(?) Stealth Fighter (see enclosure C2-C8). He is the designer of the plastic model kit of the F-19 (see enclosure C3). Though the Air Force officially denies the existence of the F-19 (see enclosure D), it is this aircraft that some have reported to have crashed near Bakersfield, CA recently (see enclosure C8).

John and I became friends because I had worked on the U-2 Project (see enclosure E-El) into which he was doing research for the book (see enclosure C) which was published by Jay Miller. John and I are both high performance aircraft buffs. I DO NOT claim to be a UFO buff! John wants to build an authentic plastic model kit of the Snowbird aircraft. (see enclosure C6).

I have alleged (see enclosure F) that the reason that the F-19 (or whatever its official designation may be) is so secret is because it is made of the (reconstructed) skin of a crashed flying disc. This is my scenario-

1. An Alien aerial aircraft (NOT spacecraft) on a reconnaissance mission crashed in New Mexico in July of 1947 (see enclosure G-G5)
2. Some of the debris (excluding the crew escape capsule) was recovered and sequestered at Wright-Patterson AFB from individuals as important and powerful as Senator Barry Goldwater (see enclosure H- H7).
3. An early stealth project (Radar Scope) was an attempt to define the electrical characteristics of this debris. According to the story from the Air Force individual who "leaked" this file card (see enclosure I, from the UFO archives at Norton AFB, CA), discoidally shaped aerial targets made of the crashed flying disc material, were towed behind aircraft, while their radar return signatures were photographed from a CRT. This Project took place at the Aeronautical Systems Division at Wright-Patterson AFB, fed from information/material from the Foreign Technology Division (see enclosure I-I2).
4. Following the loss of our (Israel lost them) first line fighter aircraft (the F-4 Phantom) to the Egyptians (from Soviet supplied equipment), a true need for a tactical stealth fighter became evident (see enclosure C2). Lockheed Aircraft Corp. with its strong ties to the Foreign Technology Division was in a prime position to experiment with some of its designs made of the reconstructed crashed flying saucer material. An old Kelly Johnson design was resurrected (see enclosure J-J3) and the XST was born.
5. The XST was flight tested at Groom Lake, Nevada (see enclosure K-K7) and then at Tonopah, Nevada (see enclosure C2 pages 227-228) against captured Soviet made radar systems.

The design of the XST was modified and improved for production and a contract was awarded. The production version is built (completed) away from the Groom Lake facility (which is a test center) at Tonopah, Nevada (see enclosure L-L8).

There are rumors now circulating that we (the United States) has made a Strategic Defense Initiative "deal" with the Aliens and that they are down in force now at Groom Lake, Nevada (Dreamland). They (the little Aliens) are ostensibly referred to as the "Dreamland Munchkins" (see enclosure M-M1).

As to the authenticity of the Snowbird document, I can only say that I can NOT find ANY government agency willing to Officially declare it a phoney. I HAVE been interviewed by the Defense Investigative Service for making a request to my security office to authenticate it (see enclosure N-N5).

May I make a suggestion- You appear to have a large readership, make up a petition with the signatures of your readership to our Government for an Official declaration as to the document's authenticity. You are welcome to use my name and to use the material I have enclosed, but only for the purpose of authenticating or REPUDIATING same and sharing it with your readership.

Thank you, for your time, Sir.

Sincerely

from Lee Graham
