Dear [REDACTED]

Very nice to meet you here. The first main report so far is what is provided to Dr. Greer for the movie. To date we have some additional analyses of the specimen and have found gene mutations that we believe explain the size of the specimen. See the attached. From slide 15 is the newer analyses of the first dataset.

We have done a second sequencing of the specimen to confirm the first round results and that is being analyzed right now.

Please understand these studies are expensive, and I have no formal funding for this. It's done off my Endowed funds (which supports other studies as well). My costs to date are in excess of \$30,000. I have asked no one for reimbursement. The time spent on the analysis, at current rates, would be an additional \$50,000 of "people time". Again, I expect no reimbursement—this is for the love of the science.

Attached is an update I gave to a science journal of our recent progress. It is my fault, and my fault alone, that you have not been updated. My apologies for that. The information contained is still not "complete" or finalized, but the key thing is that we have found mutations in genes that correlate with KNOWN abnormalities related to stature, #s of ribs, and skeletal abnormalities (slide 20). This SUPPORTS (but does not prove) that the specimen is more than "just" a 22 week year old fetus. It could still be a 22 week old fetus... but the gene mutations we found suggest that the reason the specimen looks like it does is likely due to understandable genetics—not a mistake. So all the people who were critics and dismissed the specimen as a mistaken identity are wrong. There is something different about the specimen, but we are still not sure exactly.

However, there is no "smoking gun" that this is alien. All sequences found so far are "human". I have found NO sequences that would point to something obviously unexpected. And I have tried.

However, as I have had many conversations with Steven Greer about—a sufficiently advanced alien culture could fool us in many ways.

I am very appreciative of your provision of the sample, and will be happy to keep you updated on progress.

If you do not get the powerpoint in the next email, please let me know and I will find another way to provide it to you. It is 6 megabytes so is a little large.

Best,
[REDACTED]

Subject: from [REDACTED] re ATA

Hello Garry,

This is a note we got from Sr. Navia who kindly let us examine the Atacama Humanoid in Spain. I have told him that all the official reports we have are on the website and that you continue to work on the project but have many many other things going on and that the type of studies you are doing are extensive and time consuming.

I just wanted to be sure that he had your e-mail and that you have his.
If and when there is a final report, please also send a copy to Ramon.

Thanks

Dr. Steve Greer

Dear Dr:

The film and even the written results of the probes and investigations, which I have reclaimed several times, have never been received. If you do not intend to send anything to me, please let me know and you'll avoid me the burden to continue asking for them.

Another of the points of the agreement was that I would receive the results of the investigation of Dr. Nolan at the University of Stanford. In spite of the time elapsed since then, I have either received nothing. I can assure you that for the probes made at University of Granada as those made at the University of Berlin it took only one month to send me the results

I am well aware that any difficult investigation as this, takes time, but this is not a hindrance for a good communication of the occurring happenings and the keeping of the good forms., and up to now I have not seen it in our case.

I would like to know how are the investigations made by [REDACTED] ¿Would it be possible?

Best wishes.

[REDACTED]
