[REDACTED]

I think you would have heard about the ET DNA that was recently analyzed, but if you haven't here's a synopsis... Approximately eight weeks ago I was listening to Art Bell with guests [REDACTED] and the scientist that analyzed five tissue samples that Reed collected from the injured ET described in the old email below. Apparently, the tissue samples had been kept secret. The scientist stated, if I remember correctly, that the ET "Freddie" had 46 chromosomes, the same number as homo sapien sapien, but that nine of the chromosomes were different. The closest match he could make with these unusual genes was to reptiles and dolphins. I thought you might want to contact Chris Fines (info below) to find out more and possibly have Dr. Reed on the briefing team. You had replied to the email below and mentioned the publication of a book about the incident would jeopardize any scientific merit the case might have. At this time, I do not know if the book has gone to publication....

Keep on Truckin'

>Hi Steve,
>
>I came across a case yesterday which I think you will be very interested
>in. I met a woman named [REDACTED] at the San Diego UFO Society who
>represents Dr. Jonathan Reed, a Phd in psychology and a university

> professor. [REDACTED] had a most unusual close encounter in the Pacific Northwest while hiking on Oct. 19, 1996. He has written a book in collaboration with Robert Raith concerning this case and is alleged to have dramatic video of the episode as well. [REDACTED] is responsible for finding a literary agent/lawyer here in San Diego to get the book published.

> You may have heard of this incident which was recently discussed on Art Bell, but if you haven't, the following is a short, hopefully accurate, synopsis of the encounter; you can also listen to the interview between Art Bell and the professor on Art Bell's web site (if the interview is no longer on the site, [REDACTED] said she can supply the interview).

> Dr. Reed was on a hike with his dog on October 19, 1996 somewhere in the Cascades when his dog ran ahead and started barking at something. The barking turned to yelps and when Jonathan got to the scene, he found his dog being torn apart by a vibrating, glowing creature. He struck the creature over the head with a large stick. The glowing and vibration ceased... he thought he had killed it. He soon realized this was some sort of sentient being and was very disturbed he had taken a life.

> He had his video camera with him and shot video of the being as well as a black, diamond shaped ETS that was hovering in the area, cold to the touch, and unmovable (there are photos on Art's web site). After documenting, he wrapped the being in a blanket and put it in the freezer when he got home.

> One day, soon after the incident, [REDACTED] returned home to find several vehicles parked outside his house. He was afraid for his life and did not confront the intruders. When he did go into the house, he found the freezer and "Freddie", the ET, gone. This is where the story gets a little confusing. [REDACTED] said Freddie "came back to life" (was apparently just unconscious) and had telepathic communications with the professor. She did not elaborate.

> The professor has gone through quite an ordeal since the encounter and is understandably in no mood to be interrogated again. According to [REDACTED] he has no need to prove what he claims and has grown weary of the cross examinations.

> If the video is as compelling as [REDACTED] says it is, I felt you would like to speak with her and possibly [REDACTED]. She mentioned they want to handle this information to get it to the widest audience possible.

> You can contact [REDACTED] at:
[REDACTED]

> As for me, I've been living out of a suitcase for 5 months now; no I'm not homeless, just travelling alot. Took a two month vacation to Australia and Fiji to surf and dive, then off to Bahrain, and just returned from a month in the San Francisco area. I returned this past Friday and have not yet contacted the CSETI members here or checked email.

> I hope you and the family are doing great and hope to see you sometime in the near future. If there's anything I can do to assist with [REDACTED] please let me know. She did mention that [REDACTED] could be on the Art
