

Subj: Excerpt from [REDACTED] forthcoming book
Date: 4/29/02 2:04:39 AM Eastern Daylight Time
From: [REDACTED]
To: [REDACTED] (Steven M. Greer M.D.)
CC: [REDACTED]

Hi Steve

Thought you might be interested in a copy of Tom Bearden's Acknowledgements, which will appear in his forthcoming (later this year) 500 page book *Energy from the Vacuum: Concepts and Principles*, being published by World Scientific.

FYI this expose holds nothing back about how to produce Free Energy (and Anti-Gravity), and blows the lid off some free energy phenomenology that has heretofore been close hold in black projects. The overunity aspects of his Patented MEG (Motionless Electromagnetic Generator) have now, incidentally, been replicated independently by several researchers, and the theory has been published in *Foundations of Physics Letters*, a twice refereed publication.

The book is aimed at the post-graduate and post-doc level, but is still quite readable to the lay person.

Best to you and the family.

Acknowledgements

With deep appreciation I acknowledge the kind assistance and helpful critiques of [REDACTED] and other members of the Alpha Foundation's Institute for Advanced Study (AIAS) such as [REDACTED] and [REDACTED] encouraged me to write down the basic concepts of the theory of permissible $COP > 1.0$ Maxwellian systems I have been working on for three decades, and submit the effort to World Scientific. This book is the result of that effort.

A special note of thanks goes to [REDACTED] of the Department of Energy, who oversees a DoE restricted website provided for the important ongoing scientific work and drafts of the AIAS. On that site, now there are more than 100 AIAS papers, many of them dealing with EM energy from the vacuum in very rigorous fashion. Many of these AIAS papers have now been published in leading journals such as *Foundations of Physics Letters*, *Physica Scripta*, *Optik*, etc. This is an invaluable scientific effort that clearly establishes the importance and potential for extracting copious EM energy directly from the active vacuum. It also extends the present $U(1)$ electrodynamics to the much more extensive $O(3)$ group symmetry electrodynamics, in which such things as I discuss in this book can indeed be accomplished and modeled.

Also, I dedicate this book to those lone researchers and stalwart inventors who have succeeded in building working model $COP > 1.0$ electrical systems in the face of overwhelming odds and strong scientific opposition. We

particularly mention [REDACTED]
[REDACTED]

[REDACTED] There are quite a few others, of course, and no slight is intended by not listing all their names.

Also, I particularly acknowledge the many contributions of my long-suffering close colleagues [REDACTED] and [REDACTED] whose efforts on the bench have produced the working model motionless electromagnetic generator (MEG) experiments as well as several variants. Our first MEG patent was issued in April 2002 and a second patent application has been filed. The MEG represents the first practical macroscopic application of the geometric phase (extended Aharonov-Bohm effect) for EM power systems. I particularly thank Lt. Col. (Retired) Ken Moore for watching my back and keeping me alive. I'm also grateful to both [REDACTED] Sr. and [REDACTED] for their personal support, action, and encouragement. I particularly acknowledge more than two decades of close cooperation and work with [REDACTED] who is one of the most creative inventors on this planet; nearly a decade of work with Floyd Sweet; more than a decade of work with Frank Golden; and a special thanks to Don Jensen for his important contributions and work. Working with these inventors, I was able to physically examine working COP>1.0 power system prototypes and also experience and study the novel phenomenology that results in such systems.

The outstanding work and encouragement of [REDACTED] and [REDACTED] is particularly recognized, and I am grateful to them for their continued publication of important information and developments in cold fusion and the entire field of anomalous energy systems. I am also grateful to [REDACTED] for his cogent explanations of some tough issues and points in quantum field theory that were beyond my ken before his explanation. [REDACTED] introduced me to his cosmological feedback mechanism, and I am grateful for his important work with his colleagues in the areas of inertia, permissible thermodynamic extraction of energy from the vacuum, and possible mechanisms of antigravity. A special thanks goes to [REDACTED] and the engineers of Transdimensional Technologies, Inc. for their courtesy and demonstrations of Transdimensional's successful lifter and rotary devices, and for an introduction to the field of inertial propulsion and antigravity now ongoing under the NASA Breakthrough Propulsion Physics (BPP) research program.

To [REDACTED] I owe a very special thanks indeed for her tireless efforts in reading and proofing the manuscript and in translating the graphics. Also, I am much indebted to Michael Anderson for doing the typesetting, and to Tony Craddock for making it possible. I am deeply grateful to Tony for his unfailing encouragement and support, and for operating and maintaining my website www.cheniery.org. I also deeply appreciate the continued contributions of [REDACTED] of Network Innovations, who furnishes the website pro bono. A special thanks also goes to Dr. Steve Greer, who gave my wife and I great assistance and personal uplift at a time of personal tragedy. Dr. Greer has also now taken up the effort to develop and deploy practical electrical power systems freely taking their EM energy from the vacuum.

To [REDACTED] I also am very grateful for his extraordinary experimental work and extensive publication of valuable information, his

personal replication of a variety of systems, and his kind permission to use several illustrations in the book. His important website, <http://jnaudin.free.fr/>, is a comucopia of information, experiments, and results in this entire area, with important links to many other appropriate websites.

Also, to more than 100 special persons including those now passed on such as [REDACTED] and [REDACTED] who encouraged and supported these efforts through the years, I am very grateful. Your kind words and friendship have made a very great difference to me personally, throughout the years, and they still do.

Finally and most importantly, I acknowledge the continuing and unwavering support of my dear wife [REDACTED] without whose encouragement and tolerance this work could never have been accomplished. She made all these long years of seven-day weeks and 18-hour days possible and humanly bearable. Without her, this book simply could not have been written.

ENDS

Hi Steve
