In particular I quote Shipov on the mental nature of the spinors. I write the material world tensors in terms of the mental world qubit spinor pairs based on Shipov's formulas etc. I show the explicit connection of the material torsion field to the Bell quantum teleportation "basis" of entangled mental qubit pairs used in quantum computing. This does suggest the connection between time travel and quantum computing that I spoke about on Discovery-Learning Channel's "Ultra-Science" program that [REDACTED] has apparently adapted in his new novel "Timeline". I know of no one else other than me who has made this connection between time travel and quantum computing with the "Q-chip" as explicitly as I did on that Ultra-Science show now seen by millions of people in US and abroad. [REDACTED] was on the program with me. He does speak of both quantum computing and time travel in his pop book "The Fabric of Reality" but I do not think he connects them closely together anywhere the way I did on the same show with him?
