

Inventors and Status

Device: Back EMG tube pulsed discharge effect

Status: Have requested copy of plans that work via Steve Wilcken – contact Magradden

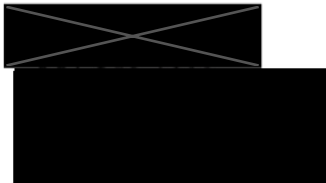

Device: Compressor for vehicle power

Status: JK asked Wilcken about replicating new experiment with fan and battery. Dax to build full engine in December upon completing Muller.

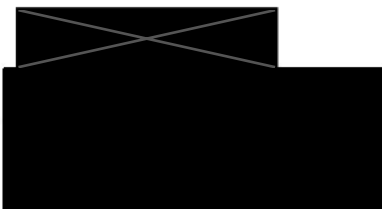

Device: Electricity from barium titanite

Status: A “tank circuit” according to Norm Hays

Device: controllable motor for multiplying electrical input, up to MW range

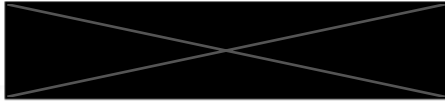

Status: device requires 7 figures to miniaturize

Device: magnetic motors in use in heavy industry

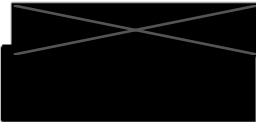

Status: Dax building 2 Muller motors – first one to be completed 10/27/02

Second to be completed 12/04/02

Device: 5 KW negative resistor, extant – has been running for 2 years

Status: asking \$50K to test their motor

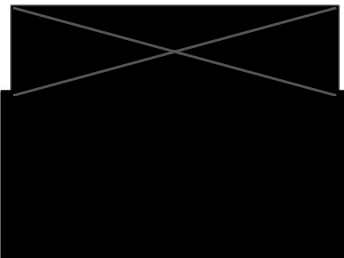

Device: perfected Howard Johnson motor

Status: Claims scientific endorsements, but nothing to test

Device: gearing system that claims leveraged energy

Status: demonstration underwhelmed Wilcken – follow-on test proposal but not done

Device: gravity to energy converter

Status: contact through Joel Garbon, will contact us when ready to demo

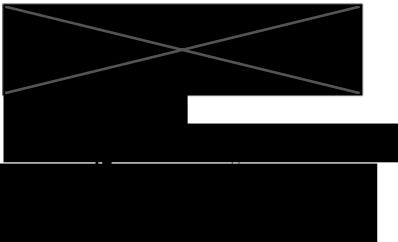

Device: magnetic motor with multi-KW capabilities

Status: not able to follow through / meetings with SG in OR in Sept.

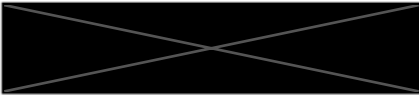

Device: Biomass to NG, references to others' inventions

Status: promised package of NG converter and quick change battery for cars to be mailed
10/25

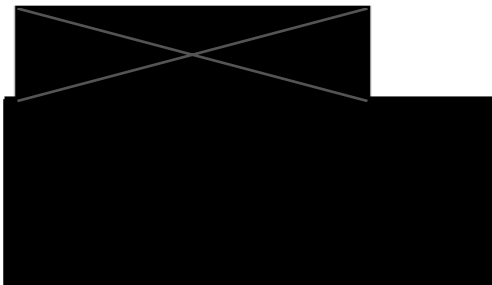

Device: power on demand magnetic motor

Status: Attempting to replicate claimed results – unsuccessfully so far

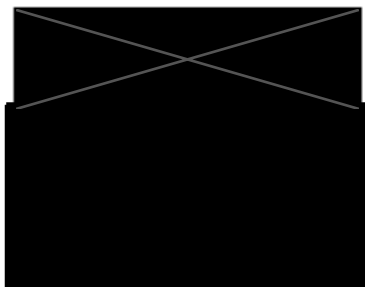

Device: Gravity reduction system

Status: on hold

Device: magnetic energy converter

Status: not responsive to queries/ disagrees with our “paranoid” strategy

Device: perpetual motion ball system

Status: Have requested 1KW version; prefers to build tiny demo first

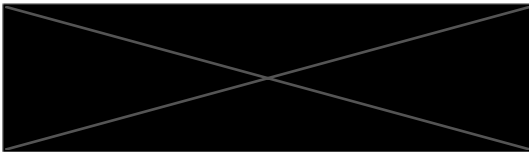

Device: leverage device to multiply force

Status: Wilcken attempting to understand his device

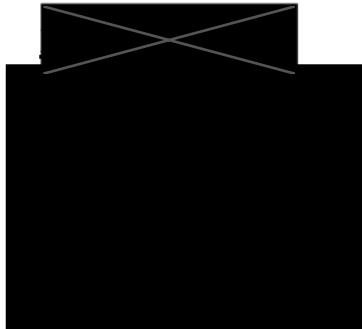

Device: Adams type motor claimed ready to demo

Status: SG to contact S. African rep.

Device: gray-based engine replacement for car

Status: no interest in licensing. Sale only

Device: gravity toenergy converter

Status: requested \$20K to finish prototype/ JK requested device recipe 10/25

Device: solar levitating motor

Status: wishes to refine internally before proceeding

.com

Device: claims device that produces 350 HP hydraulically
Status: prototype to be built by 11/1

Device: inertialess propulsion
Status: Prototype built by 11/1

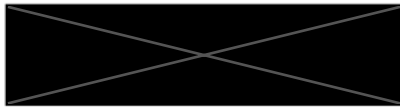

Device: catalyst additive to fuel
Status: have supplied additive for our testing/ need emission baseline tests first

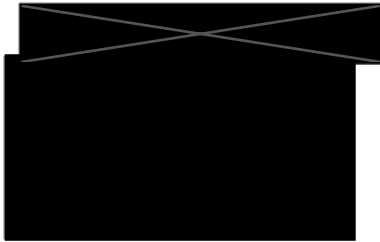

Device: Components to improve venicular performance up to 200%
Status: 10/27 : proposed to drive two cars to C'ville for us to test and retrofit our vehicle

Device: EMILIE (magnetic motor) 1/16 watt in, 2.1 watt out (DC)
Status: being tested at Valparaiso week of 10/28/ eager to meet once confirmed

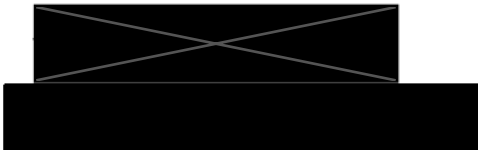

Device: 50 watts in / 500 watts out -- special uses only
Status: SC contacting through Mallove

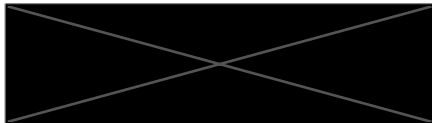

Device: Fuel vaporizer/ produces 30 -60% improvement in MPG
Status: 10/28 sending kit for us to use on fuel injected car

Device: Fuel atomizer
Status: on hold pending SG decision re commercializing

Device: 100 tons of garbage yields 90 MW + 100K gal water
Status: installing in Calgray and BC hydro. 10/27 requested LOI

Device: claims ability to build 5 KW generator
Status: AIP; objects to 3-4 test requirement and to 60 days on royalties

Device: 3 inventions -- nova plasma etherizer/ 80 MPG car/ battery charger)
Status: contact through Weiss. Has signed AIP with SEAS. Awaiting SG signature
