

Update on Inventions 102302

EXTANT

[REDACTED] Claim to have a continuously operating 5 kilowatt device with no power input (negistor). Spoke to their attorney 1021. They have requested \$50K to commence testing. JK told him we needed evidence of how the gain was computed, and would not pay the requested \$50K until/unless vetting confirmed results.

[REDACTED] Claims to have working device, tested by EE's to produce 2 watts from 1/16 watt input. Valone now believes this is potentially very significant, and has offered to consult to Sprain on a regular basis, helping with both patent preparation and device improvement. He believes the RPM's can be increased from 160 to potentially 16,000 (more likely, 10,000) thereby creating a linear increase in wattage from 2 to 200. By stacking 5 of these like pancakes, a kilowatt would be produced.

[REDACTED] showed us a levitating solar generator that he is willing to license. It looks scalable. Smith stresses that he doesn't know the efficiency, but believes it will be good. 100802: He wants to build a better one before licensing it.

[REDACTED] has access to people with lithium battery supercharger, fuel cell, organic to fuel (NG) conversion system, and knows how to convert existing cars to fuel cells. He promised a package including electric car info. (quick charge battery system) and gas plant (NG) to be sent by Friday 10/25.

[REDACTED] Has 7 inventions, including Etherizer that dissolves materials and 80 MPG car (perhaps doubling of mileage, perhaps a little less), has run his home off-grid for 14 (?) years excluding inductive applications such as dryer. JK sent [REDACTED] V [REDACTED] says [REDACTED] wants to handle everything through him. JK sent Weiss AIP for 80 MPG fuel saver, battery charger, and Nova Plasma (etherizer) machine. 10/23: Andrew said that Ward said he will have his attorney look at it.

[REDACTED] as completed one version of his device, and it ran for 2 weeks. Dax Hamilton has agreed to build it after he finishes our [REDACTED] contract (late November or early December). I am asking [REDACTED] if he can do it sooner (as well as the Comings test).

[REDACTED] is wanting \$41K paid to his group to produce two RS-3 units. Because we would have no real control of this expenditure or possible cost overruns, I told him that we couldn't fund it at this time. He will be happy to do this for us when we are more comfortable with the risk level.

[REDACTED] Meader is willing to work from a known successful replication ([REDACTED] not from Lindemann's plans which he considers incomplete. 1022: again asked Wilcken to

contact [REDACTED] or give JK contact info so we can attempt replication from a working prototype.

[REDACTED] our intern, has built the Harwood POD but it doesn't perform to the expected specs. Harwood is coaching him via e-mail. Harwood also claims one of his replicators will submit a completed functioning unit for the Z Prize, and that a Tesla patent shows how to do it to industrial size. Wilcken thinks this is similar tech. to the Gray device; back-EMF based. Harwood has declared that our prototype "is" over unity. Wilcken now questions Harwood's judgment. We have politely asked him to put up or shut up.

[REDACTED] visit not scheduled. [REDACTED] promised bids to make unit from scratch and from Adsit design by 100402. Dax is building two motors for a total of \$3,250 for delivery by 120402, inclusive of all the electrical components (windings and metglass). He claims this will be a complete working motor built from scratch. Adsit motor (from partially completed prototype [REDACTED] supplied him) will be done by 1030. 240 watt input from battery is producing 60 volts and (according to Adsit's website) 100 amps. However, Dax hasn't confirmed this figure. Dax will run this test (to see if he can generate 6 kilowatts) 1024.

[REDACTED] Friend of Fred Burks. Claims to have hydrogen to water conversion engine, but is unwilling to get license it. JK asked Fred to approach about JV company 093002. No response 100702.

[REDACTED] Similar to Cole Motor (see above). Recently dropped US rep, who was an evangelical Mormon (disliked for this by both [REDACTED] I have written them in S. Africa offering to work with them. No response. SG to call them in S. Africa.

[REDACTED] Has documented (CA and other tests) showing 25% increase in mileage. Improvable.

[REDACTED] reportedly has 80 MPG car. Accessible via [REDACTED]

[REDACTED] motor [REDACTED] ready to build. Moves a ball around a track endlessly. Again asked him for proposal for larger unit to produce 1 KW, 093002. Expects grant to build smaller version first, 100602.

[REDACTED] Spoke again after 10 years. Remembered me. Said Boeing tests "proved" the concept; [REDACTED] says they were inconclusive and that Cook was given everything he needed by Boeing to eliminate the vibration problem, but nothing has happened in 2 years. [REDACTED] says he needs \$50K (\$20K income) to make it right. JK asked Cook to clarify 100102. Asked again 100702.

[REDACTED] Claims his group has well-documented catalyst that increases mileage by minimum [REDACTED] and eliminates diesel particulate emissions, improves coal BTU's and drastically cuts emissions. Claims extensively documented over 10 yrs. NDA [REDACTED] data [REDACTED]

expected this week. Samples received 1020. MPG savings rise over time; can reach 60%+ improvement.

POSSIBLE

[REDACTED] claims his mechanical over unity motor is nearing completion, to be tested by them by 1030.

[REDACTED] also has a catalytic converter for H₂O₂. He claims to have an OU device nearing completion. He is preparing the Resonant Signature device to operate automatically.

[REDACTED] is on hold until he can demonstrate something.

[REDACTED] is building his device, and presently doesn't need funding.

[REDACTED] K spoke to President of company and an investor. [REDACTED] knows developer, and he promised her a device by October. I have asked [REDACTED] for an update, 100202.

[REDACTED] Has specs for gravitational converter. Expects completion by 1201. Needs no help.

[REDACTED] Based on their comments to me, they are not going to bring this to market successfully. The new demo is still to be rescheduled. Lindemann believes they have a real, functioning Gray replication.

[REDACTED] has referred another inventor FIZZIONE who seems to have scientific credentials and an interesting device, but there is nothing testable.

[REDACTED] Simulation cannot be done because software cannot model an aspect of his system. Seeking Alberta state funding. Will not collaborate with SEAS unless we visit him; cannot visit US.

[REDACTED] Told [REDACTED] that he will call SEAS first when he has a device to demo.

[REDACTED] Failed to keep his promise to meet with SG in Oregon.

[REDACTED] has built the device to specifications, needs to refine one component. Dax believes he is very close to a testable unit. Needs additional input from Bedini.

[REDACTED] Dropped by Boeing, spoke with [REDACTED]. He and [REDACTED] have developed a cordial and respectful relationship. [REDACTED] says a university is planning a proposal to research this, and will refer them to Ted for possible collaboration.

Magnetic Energy Converter. Have a serious if conventional business plan based on Godin's Russian technology (that Valone takes seriously), and expressed interest in

collaboration with SEAS. Their COO promised to read the Strategic Overview and get back to me. COO Kruglak has not responded to my calls and letters since.

[REDACTED] Has magnetic device with promising design. Writeup received and faxed to Wilcken 100202.

[REDACTED]. Claims to have centripetal generator, prototype nearing completion.

[REDACTED] Claims to have force amplifier (lever). Complex, obtuse plans. Submitted to Wilcken for review. Wilcken finds him nearly impossible to talk with. I told him to limit brain damage.

[REDACTED]. Claims to have gravitational propulsion. JK offered to sign NDA. No response. Wrote again 100502.

[REDACTED] His device has no new physics, according to [REDACTED]. However, claims to have metered reduction of power consumption by 75% on motor. Was to call Wilcken 100102 and have Wilcken report to JK. No communication as of 100702.

[REDACTED]. Would not work with us except if we paid him thousands under contract for consulting. Would not divulge even under NDA. SG to contact him.

[REDACTED]. Well-regarded by Wilcken. Wrote Alek 1004 asking for a demo of his unit. No response. He is preparing for a public presentation in November.

[REDACTED] Ph.D. in physics, had design that was patent pending. Needed permission of investors to talk to SEAS. Failed to respond to multiple contacts. SG to contact. No telephone number given by Carpenter; e-mail is [REDACTED].

[REDACTED]. Russian thought well of by Valone. His attorney consistently fails to call back.

[REDACTED]. Claims to have electricity from tap water device. Were unwilling to license SEAS. JK wrote them about J.V. possibility 092902.

[REDACTED] Claims to have invested \$5MM and to have another \$15MM raised. Wants to collaborate but will not license SEAS. JK wrote them about J.V. possibility 092902.
