

Update on Inventions 09/24/02

[REDACTED] showed us a levitating solar generator that he is willing to license. It looks scalable. He also has a catalytic converter for H₂O₂. He claims to have an OU device nearing completion. He is preparing the Resonant Signature device to operate automatically.

[REDACTED] is ready to focus on the over unity device, provided we give him \$10K for 2 months salary and \$5K for parts, all up front (he will document the parts).

[REDACTED] has a lithium fuel system and organic to fuel conversion system.

[REDACTED] 've drafted a proposal for funding. He has not responded.

[REDACTED] has completed one version of his device, and I have requested details 0922.

[REDACTED] says he is "99% complete with \$300K bonds deal, to be delivered within 1 ½ months." Sounds upbeat, eager to work with SEAS once this is done.

[REDACTED] leader has returned from his trip and STILL has not received the book from Lindemann. He promised to call [REDACTED] and I offered that we would pick up the cost of fast shipping if necessary. An interesting sidebar: [REDACTED] poke with [REDACTED] who believes that the [REDACTED] racecar replication is real and is based on the [REDACTED] device! I have asked [REDACTED] to determine why [REDACTED] believes this is so. If the [REDACTED] demo goes off without a hitch, this could provide us a basis for seriously funding the [REDACTED] work, for example by having [REDACTED] do it.

[REDACTED] our intern, has built the [REDACTED] POD but it doesn't perform to the expected specs. He is attempting to reach [REDACTED] to discuss this, and Wilcken is helping.

[REDACTED] Has specs for gravitational converter. Expects completion within 2 months. Needs no help.

[REDACTED] in addition to his willingness to build a [REDACTED] device, [REDACTED] is planning to visit [REDACTED] Oct. 5th. Has discussed this with [REDACTED]

[REDACTED] Based on their comments to me, they are not going to bring this to market successfully. The demo scheduled for Sept. 7th failed to happen. It has been rescheduled.

[REDACTED] Mr. X (with the 5 KW device in continuous operation) has not been in touch with [REDACTED] these past 2 weeks. He has taken in an investor, and [REDACTED] is concerned he may no longer be interested in us. OTOH, Andre has referred another inventor FIZZIONE who seems to have scientific credentials and an interesting device, but there is nothing testable.

[REDACTED] Friend of [REDACTED] Claims to have hydrogen to water conversion engine, but is unwilling got license it.

[REDACTED] Simulation cannot be done because software cannot model an aspect of his system. Seeking Alberta state funding. Will not collaborate with SEAS unless we visit him; cannot visit US.

[REDACTED] Told Joel Garbon that he will call SEAS first when he has a device to demo.

[REDACTED] Failed to keep his promise to meet with SG in Oregon.

[REDACTED] Has built the device to specifications, needs to refine one component. [REDACTED] believes he is very close to a testable unit.

[REDACTED] Similar to [REDACTED] (see above). Recently dropped US rep, who was an evangelical [REDACTED] disliked for this by both [REDACTED]. I have written them in S. Africa offering to work with them.

[REDACTED] Dropped by Boeing, spoke with [REDACTED] He and Loder have developed a cordial and respectful relationship. Perhaps we could get Orbitek to fund this, pursue an SBIR with SEAS on this?

[REDACTED] Have a serious if conventional business plan based on [REDACTED] Russian technology (that [REDACTED] takes seriously), and expressed interest in collaboration with SEAS. Their COO promised to read the Strategic Overview and get back to me. COO [REDACTED] has not responded to my calls and letters since.

[REDACTED] Has documented (CA and other tests) showing 25% increase in mileage. Improvable.

[REDACTED] Has magnetic device with promising design. Sending writeup this week.

[REDACTED] inventors. Includes [REDACTED] with 80 MPG car, [REDACTED] with disintegrator for disposing of waste, and others. To contact SG.

Fred Epstein [REDACTED] Claims to have centripetal generator, prototype nearing completion.

[REDACTED] Claims to have force amplifier (lever). Complex, obtuse plans. Submitted to Wilcken for review.

[REDACTED] [REDACTED] completing. Still does not work as specified.

[REDACTED] ready to build. Moves a ball around a track endlessly.
