Subject: Project Pheonix

> Dear Dr. Greer,
> After hearing you tonight on the Art Bell Show (June 15, 2001) I have
> decided to contact you and offer the successful results of my 25 year
project
> for your use. It is all that I have to offer, but I hope that you take
the
> time to read this and consider the project's ramifications.
> My name is Richard I. McKie.
> I am the chairman of Gamma Star International, or "GSI" for short.
The
> corporation's full name is Gamma Star Power International, Ltd., and is
> situated in Vancouver British Columbia, Canada, for political reasons
which
> can be explained to you in the future if you would like. The President of
> GSI is Mr. Chris Boatman, former Vice Chairman of B.C. Hydro, British
> Columbia, Canada.
> With an electrical engineering background furnished by the US NAVY, I
> started the "Phoenix Project" in the early 1970s and continued a
successful
> trail of research which led to my being awarded the first United States
> patent for "over-unity" electric energy production.
> That means that my electric energy producing units, after being
started

- > from an external source, can be disconnected from that external source and
- > continue to operate at full production levels of electric energy output to a
- > load or loads.
- > The patent number is 5,146,395, dated September 8, 1992, and named "A
- > POWER SUPPLY INCLUDING TWO TANK CIRCUITS." It was granted in 13 months after
- > date of submission, all claims were granted, and no changes were requested.
- > The unit covered in the patent was capable of producing 120 volts and 100
- > amps of either AC or DC electric energy without the use of any fuel, and was
- > capable of operating in this condition until turned off.
- > I retained sole ownership of the patent until last year; when I allowed
- > it to become public property through the abandonment process. I did this
- > because the protection granted in the patent was not germane to the higher
- > level of research that has been attained. I have made myself available, via
- > the keelynet, to anyone that is interested in building a copy of the supply
- > for his or hers own personal use.
- > The current preproduction unit has been refined to weigh under 20 lbs.;
- > fit entirely inside a standard interior wall circuit breaker box and as did
- > it's predecessor, requires no fuel of any type. In fact, from an
- > environmental standpoint, it is entirely environmentally benign.
- > This unit is "sized" to produce a continuous electric energy output of
- > 240 VAC or VDC / 200 Amps / 2 or 3 phase 60 or 50 cycle output of 24 kWatts.
- > It is named an "ERU" for "electron Recycling Unit."
- > The operational frequency can be set at any frequency, so the 400

A large handwritten signature, possibly 'Woz', is written in the bottom right corner of the page. It is accompanied by several large, loopy scribbles and a checkmark-like mark.

cycle

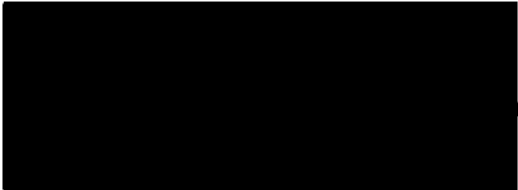

- > systems currently utilized in the aviation field could be powered by the
- > units.
- > By increasing the output to 40 kWatts, which requires that a dial be
- > repositioned, and then placing and connecting 250 of the individual units
- in
- > a special 40 foot shipping container, a 10 MWatt power source is

available.

- > This system is named the "POD MOD" for "Power On Demand MODule." A 20
- foot /
- > 5 MWatt unit will also be made available.
- > By placing the correct number of units directly within the turbine
- halls
- > of existing electric energy generation facilities; all facilities that are
- > capable of continuing operation can be repowered to full capacity; but not
- > require that their antiquated generation systems be used. This goes for
- all
- > hydro, nuclear, gas fired turbines, coal powered facilities, photovoltaic
- > and/or steam powered. This would eliminate those points of pollution.
- > To eliminate the use of fossil fuel transportation, we have designed
- and
- > are beginning to test a system that allows for the retrofitting of any and
- > all internal combustion engines in all uses; from "ic" (internal
- combustion)
- > to DC electric; using multiple numbers of our power units as the source.
- > By retrofitting the millions of existing vehicles already "on the
- road,"
- > in the air, on the "rails," and on the seven seas; we feel that we can
- > positively impact the present pollution problem in a much faster manner.
- > Our system allows for the vehicle in question to be utilized just as
- it
- > is presently, but would not require the addition of batteries than are
- > presently used; and at the same time it eliminates the use of all current
- > "fuel" requirements.
- > I hope that this following information gives you hope for the future;
- as
- > we have identified our first commercial customer site and have attained
- the

> help of our local electric power utility in aiding in the implementation
of
> the ERU system.
> Baring any unforeseen problems we hope to have the commercial site up
and
> running in the next six months.
> I place myself at your disposal and will contact my federal
representative and federal senators as was suggested this evening.
> Having accomplished the project "on my own," I understand the "pull"
that
> a project can place on a person and I commend you for your perseverance.

>
> Respectfully,
>
>  Chairman
> Gamma Star Power International, Ltd. (GSI)

> 
>
>
>)
>
>
