Subject: build a UFO

Did you know that the knowledge necessary to build a UFO has been on this planet since 1926. The man, who gave us this information, also lived in this local area of Crozet. I know how one would work and fly. It is not as complex as you think. Not only that, I am building a flying model of one now. As soon as a patent has been applied for I will reveal this information. It will shock you on how simple it is. Not only that, one could be built for people to fly and would fall under FAA regs. part 103 and would require no license to pilot. One could be built in the \$20,000-\$50,000 range, the first \$10,000 going for the power plant and the rest of the expenses going to the airframe design. I would like to get together and talk about this if you like. I live here in Crozet. Call [REDACTED] or email me.
