Hi [REDACTED] thanks for getting back with me. I know people here in Spokane <[REDACTED]ws> and nearby, who are busily searching for ways to harness ZPE for electrical power production. Ed Gray's PCD Engine is a fine candidate for demonstrating 'Cold Electricity' and it has an effectively proven capacity to power various household appliances. Oil corporate officials witnessed Ed's public demonstration of his Pulsed Capacitance Discharge Engine many years ago, and yet it has not seen open production, but should. Please encourage Dr. Greer to visit the good folk at the above mentioned site to network with them, thanks. — Showing the World that dependency on OIL is a deadend is a great way to go now, especially in light of the tragedy of Afghan innocents dying in this coming Winter. — Another great site <www.dnai.com/~zap> will provide Dr. Greer much food for thought regarding alternative energy systems, and what we think we know about the ocean of energy around us. — Peace, Greg O'Neill
