Re: Re: ORBIT: Cydonia a distraction? ALERT EARTH!

No, but there is persuasive evidence that Tesla style weaponry has been used for many years for such effects. The Soviets also appear to have had this capability for around 30 years.

If you read the Harry Mason article that I sent you about a week ago (Part I is up on the Website at <http://www.cseti.org/position/addition/brightskies1.htm>), you will see that EM Tesla style weaponry could well have been used to induce the Kobe earthquake (at whose epicenter was the laboratory that was the heart of the Japanese efforts to develop Tesla EM weaponry), the Oklahoma city "bombing" (where a number of Federal employees had been told to take the day off, and weird electromagnetic effects were observed ahead of time). Plus TW800.

Weather modification was achieved many years ago ('50s) by Wilhelm Reich, the protagonist of "orgone" energy, whose "cloudbusters" were used for quite a while to create rain. Reich was subsequently jailed by the FDA, all his books were burned, and he died in jail.

Yet Larry Warren, who wrote "Left at East Gate", his account of the Bentwaters UK UFO incident just off base, has gone on record that Bentwaters had Wilhelm Reich type "cloudbusters" on the base for weather modification. They have a very distinctive appearance, with multiple tubes, and require grounding to water.

There have been swarms of earthquakes recently reported from the China Lake area, and there have been a number of photos from weather radars and satellites on the Net in the last month showing holes in clouds.

Harry Mason's article about EM weapons testing in Australia is a must read IMHO as it is appalling what is going on. He postulates that various factions around the world (Russians, US, Israel, Japan) are engaged in in-fighting over the control of these earthquake and weather control systems, and are not above having a go at each other, a la Kobe.

He makes a good case that one recent case in Australia was a test drive of a system Japanese imperialists were buying from the Russians. Weird, but credible.

Tony
