Subject: UCSF contacts Stanford article

Hello Dr. Greer, I apologise for the delay.
Here are links to: Stanford's publication regarding the Atacama being below:
as well as contact information for the two people responsible.

<http://med.stanford.edu/news/all-news/2018/03/mysterious-skeleton-shows-molecular-complexity-of-bone-diseases.html>

In this article I noticed a familiar name "Atul Butte" of Butte Lab the Lab referenceed in my prior email. Working with "Sanchita Bhattacharya" seen in the link below:

<http://buttelab.ucsf.edu/people/>

Here the Stanford Article References the two along with the roles regarding study and publishing:

"After five years of deep genomic analysis, [REDACTED] PhD, professor of microbiology and immunology at Stanford, and [REDACTED] MD, PhD, director of the Institute for Computational Health Sciences at the University of California-San Francisco, have pinpointed the mutations responsible for the anomalous specimen."

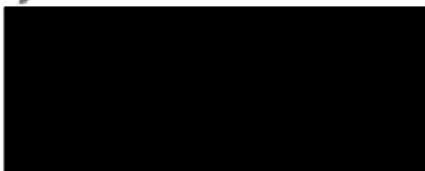

[REDACTED] who holds the Rachford and [REDACTED] professorship, and Butte, a former Stanford faculty member who now holds the Priscilla Chan and Mark Zuckerberg Distinguished Professorship at UCSF, are senior authors of the study, which was published online March 22 in *Genome Research*. Sanchita Bhattacharya, a bioinformatics researcher at UCSF, is the lead author."

Here is a link to Atul Butte's UCSF profile with is contact information.

<http://profiles.ucsf.edu/atul.butte#toc-id2>

[REDACTED] MD, PhD

[REDACTED]

Bioinformatics researcher at UCSF, and the lead author.

Email

I hope this helps. If there is anything I can do to help let me know. I have access and use regularly the internal research database it is linked to all research projects done on campus. It's a tool necessary for my job. I will be back at work on Friday and you can bet I'll be working hard!

Take Care
