[REDACTED]

[REDACTED] crash of a forcefield protected Lear Jet
[REDACTED]
[REDACTED]

>
>Posted by : [REDACTED]
>
>A personal report by [REDACTED]
>
>At approximately 11:00 P.M. On Dec 13, 1994 there was a major 8 state power
>blackout.
>
>The source of the blackout was announced on the news as Los Banos, Power
>Station, 75 Miles from Fresno, CA.
>
>14 hours later, the news media came back on and issued a correction, it
>said the site of the overload (drain) was in some remote, unnamed, part of
>Idaho.
>
>What happened in the intervening time.
>
>At 11:47 a.m. on December 14, 1994 a Lear Jet, operated by Phoenix Air,
>from Cartersville, Ga, which according to the authorities was leased by the
>U.S. Air Force for use in maneuvers with the California NG F16's stationed
>out of Fresno Airport, crashed on Olive Street in Fresno.
>
>Olive Street is the extended base leg of Fresno, Airport.
>
>According to the official releases the craft was carrying highly classified
>electronic equipment, which "would simulate the different radar targets of
>various Soviet aircraft" and the CA NG pilots were trying to intercept it.
>
>Immediately after the crash, National Guard troops (obviously already
>alerted) descended on the crash scene, cordoned it off, and evacuated
>everyone within a 2 block area.

>
>One witness said he saw the aircraft coming down the street and thought it
>was a car (meaning moving at the rate of 25 - 35 mph), this is before the
>craft crossed the intersection of Chesnut and Olive. A Major intersection
>with a metal signal pole. (San Jose Mercury News, Dec 15, 1994)
>
>I had, not too much sooner, just finished reading Ether Technology, a
>rational approach to gravity control, Rho Sigma, and Electrogravitics
>Systems: Reports on a new propulsion methodology, ed Thomas Valone.
>I am also retired Air Force, and an ex Air Traffic Controller, so the light
>bulb flashed.
>
>I don't claim to know all things, but the last ten 10 years of my Air Force
>Career were in Logistics, Transportation and planning.
>
>I know for a fact that there is no legal basis, and in fact it is illegal,
>to contract with "civilians" to perform with active military in
>"maneuvers". I also know that the military has its own in house resources,
>to fulfill such requirements.
>
>The only civilian aircraft that can legally be incorporated into or used by
>the military is the Civil Reserve Air Fleet and that took an act of congress.
>
>I also know that the target on the scope of a radar blip is a dot, and one
>can not determine from the return the type of aircraft, only its size -
maybe.
>
>Phoenix Air is just another CIA operated airline and hence the Air Force
>and CIA were obviously in training.
>
>In less than a year (1998) more than 20 fighter aircraft have crashed - an
>unusually high number.
>
>Recently an A-6 out of Aviano, Italy, without suffering any structural
>damage, knocked down the massive cable, carrying a gondola in Italy. A feat
>that defies the laws of physics.
>
>On the 50th Anniversary of the Air Force an F-117A, in a high G maneuver
>lost its tail and crashed. The Air Force naturally had a cover story.
>
>The F117 is made of composites and cannot take the stress of evasive
>maneuvers and high G's in a normal operating environment.
>
>The F117A flew successive missions over Baghdad, experiencing the heaviest
>ack ack barrage ever thrown up, even greater than WWII without so much as a
>scratch on any of the craft.
>
>The now common video footage of the Gulf War and the Nighthawk of this raid
>reveal to the perceptive, some unusual qualities.
>
>1. The pinpoint air strikes require two aircraft, one for targeting and
>IASING and the other launching the missile.
>
>The targeting aircraft virtually hovers over target, as there is no change
>at all in the field of vision, no change in perception, no indication of
>motion or movement. The targeting craft is motionless.
>
>The targeting craft is not a drone, (which would move) or a satellite, or
>anything else as a number of clips they have left in the conversations
>between the targeting and strike aircraft and you can hear the requests,
>confirmations and instructions exchanged between the two pilots.
>
>Hypothesis: The Armed Forces, through DARPA, have developed a technology
>that in all probability utilizes electrogravitics or some form of electronic

>radar shielding and force fielding.

>

>To grasp that one needs to review Ether Technology by Rolf Schaffranke (Rho Sigma). I am tempted to test copyright and post a partial quote of this interesting book. On page 25 he discusses A Dramatic Report, by Mason Rose, Ph.D., President University for Social Research. The report is on the shelves of the American Technical Library, the Pacific Aeronautical Library in Los Angeles, 7660 Beverly Boulevard, datelined Apr 8, 1952, its author is listed as Mason Rose, Phd, formerly President of the now defunct, "University for Social Research" in California.

>

>It starts as follows: A Simplified Explanation of the Application of the Biefeld-Brown Effect to the Solution of the Problem of Space Navigation.

>

>The scientist and layman both encounter a primary difficulty in understanding the Biefeld-Brown effect and its relation to the solution of the flying saucer mystery.

>

>THE DIFFICULTY LIES IN THE FACT THAT SCIENTIST AND LAYMAN ALIKE THINK IN ELECTROMAGNETIC CONCEPTS, WHEREAS THE BEFIELD-BROWN EFFECT RELATES TO ELECTRO-GRAVITATION.

>

>An interesting chapter, for the Newtonians, is The Gravitational Constant is not a Constant at all. Dr Erwin J. Saxl.

>

>Side effects of this technology include:

>

>1. Radar invisibility

>2. Force fielding

>3. Matter snatch

>4. A field in proximity to a major power transmitting station will overload and short out that stations equipment.

>

>As regards Radar Invisiblity. I suggest that this is purpose to which the CIA were operating their aircraft in "maneuvers" with the California Air National Guard. Not to mimic radar signatures of Soviet aircraft (a proposition at once false).

>

>As regards Force Fielding, I suggest that the events noted, reported (on TV and in the papers and divulged through my own personal investigation) are proof that the Lear Jet was protected by a force field.

>

>As regards Matter Snatch - I found in my personal investigation examples of that also.

>

>As regards overload a power transmitting station. I recall the 8 state blackout, its original siting at Los Banos, and the public announcement, after the crash, that it was in remote Idaho.

>

>In January through May of 1975 I made weekly trips to Fresno, to visit my companion who was on temporary assignment there, working for the State of California, Office of Emergency Services.

>

>I stopped on every trip at Los Banos, at a truck stop for coffee and a sandwich and had conversations with the help and locals therein. They confirmed that indeed the power failure was at Los Banos. A waitress said her husband had a hell of a time because he was on duty at the time. Los Banos is only a truck stop and the power transmitting station - a massive array of towers and transformers.

>

>Force fielding:

>

>The Lear Jet came down the extended base leg of Fresno (Olive street) losing altitude. It apparently could not grasp, at its control surfaces,

>the air necessary to make a turn into final. Which would be expected if its
>"force field" was engaged.

>
>The fact is that the CIA aircraft could not execute a turn onto final
>approach from base leg. If it had a hydraulic problem, which I doubt, it
>could have accelerated and either would have crashed in a less populated
>area or slowly maneuvered for an extended final approach. But the craft
>was losing momentum, and airspeed.

>
>The papers made a hero out of the pilot, because "he avoided" an elementary
>school. Not the case, the elementary school is offset from extended base
>leg (Olive Street).

>
>The Lear Jet, crossed (at ground level) but without being able to touch
>down, despite its forward motion of less than 35 mph a major intersection
>- Chesnut Street. On the far corner (relative to the craft's direction of
>travel) of Olive and Chesnut is a large metal signal pole. The right wing
>bent that pole at a 90 degree angle, and the street sign was snatched off
>the pole and drug under the craft, gouging a long narrow gash in Olive
>street (still no touch down, no rubber on the surface of the road).

>
>There is a another street past Chesnut. Recreation Ave. On the right hand
>side between Chesnut and Recreation Ave were three telephone poles. One of
>which was at Recreation and Olive.

>
>The right wing of the Lear Jet then chopped down two telephone poles. It
>then (simultaneously) moved a one ton landscaping boulder located in front
>of a Real Estate Brokerage close to Recreation Street, whilst stripping the
>roofing tile off the building a distance of 14 ft (very wide wing, eh),
>speed of the craft at the time was approx. 25 mph.

>
>When the right wing came in contact with the third telephone pole (it still
>had not lost its wing, violating four times the laws of physics) it
>apparently grounded out. As the third pole on the corner of Olive and
>Recreation, unlike the other two poles, has traveling down its length, and
>under ground, cable and conduit. I suggest that the field came in contact
>with the electrical field traveling down the telephone power pole.

>
>At that moment, the craft apparently lost its shielding, wheeled right and
>plowed into an apartment complex, on the right and other side of Recreation
>Ave. destroying one apartment and damaging several others. There was then a
>fire.

>
>The local TV Station in February 1995, produced a one hour special (which I
>video taped) Mayday over Fresno. It had the usual homilies for the
>departed, but the Fire Chief, escorted the wife of the pilot over the scene
>and she too was totally amazed that this aircraft could do all of this
>damage, without losing its wing.

>
>I'm not for a benefit of Ether Technology or Electrogravitics (I don't
>believe in the Ether and think that Rolfe is wrong here) is that with force
>fielding, any object of less weight (mass if you wish) that comes into
>contact with the craft will be deflected, any object with more mass, will
>deflect the craft.

>
>The Lear Jet obviously could "decapitate" these poles, and bend the signal
>pole, because it was "force fielded" and had inertial mass behind it.

>
>I of course can't "prove" any of this stuff, except to offer up the
>newspaper reports, the video tape and the results of my own investigation.

>
>If the obvious is too hard to swallow, for those indoctrinated in current
>physics or who believe in the esoteric and metaphysical like Einstein's
>relativities. So be it.

>
>I have not exaggerated nor misstated anything. And have typed this with the
>San Jose Mercury news in front of me, the video tape playing and from my
>own notes.

>
>Make of it what you wish. As far as I'm concerned it is very obvious that
>the DoD has incorporated (retrofitted) into its airframes some portion of
>this advanced technology, if not the propulsion then enough to make the
>craft virtually invisible and invincible to ground or missile fire.

>
>Perhaps that is why General Horner, so emphatically stated, that there is
>no known defense to the F117A. A very strong statement to make, if all we
>are talking about is radar invisibility. No known defense, means also ack
ack,
>fighter, missile or any other munitions thrown into the air.

>
