

**RE: ATDG'S ADVANCED PROPULSION SYSTEMS, ENERGY
GENERATION SYSTEMS & ADVANCED SAUCER AEROSPACECRAFT**

ATDG is committed to the development and commercialization of readily achievable and economical Advanced Non-Linear Propulsion Systems for implementation in our Advanced Saucer Aerospacecraft designs. ATDG's Advanced Non-Linear Propulsion Systems and Advanced Saucer Aerospacecraft are planned to be a safer and more cost-effective replacement for current private and commercial airline transportation methods, i.e., jet and rocket engines, etc.. Additionally, ATDG's Advanced Non-Linear Propulsion Systems will revolutionize and revitalize the rocket and space commercialization industries by making it possible to economically launch and retrieve satellites as well as research and explore the other planets in our solar system. Just imagine the possibilities if one could go to one of the other planets in our solar system as easily and economically as we now take a flight to another country. What is most unique about ATDG's Advanced Non-Linear Propulsion Technology is that it is achievable with current materials and design methods and at costs which represent manifold savings over current manufacturing expenses. What is probably the most unique and insightful aspect of ATDG's design theories and principles is that they are totally based on and are in harmony with Nature and the Environment. We realize that on the surface this sounds a bit flowery and unscientific but the interpretation and implementations are completely systematic leading to powerful thrust generation and motion characteristics (capabilities) which are based on new and advanced physics, and engineering design implementations.

Using the same scientific and natural principles as in the propulsion technology, ATDG is also developing and commercializing very Advanced and unique Energy Generation Systems. These systems generate electrical energy while revitalizing the environment at the same time and they are also designed to provide for the electrical energy requirements of ATDG's saucers. ATDG's Energy Generation Systems are scheduled to be a safe and economically efficient alternative to hydro, fossil fuel and nuclear power stations. Furthermore, our Energy Generation Systems can be scaled down and made available for the individual consumer as well, such that the individual can provide power for their own house, farm, or region independent of the Power Grids at a fraction of the cost while improving the environment at the same time. Like all of ATDG's Technologies, the Advanced Energy Generation Systems are based on advanced physics and thermodynamics interpretations and implementations of natural principles. The implementation of our Advanced Systems do not involve the utilization of exotic materials or expensive equipment, but rather the usage of readily available and inexpensive off-the-shelf components and parts. This is accomplished through a thorough understanding of the underlying scientific principles that this technology is based upon and the synergistic merging of the best design processes.

ATDG's Advanced Saucers are also very aesthetically designed and ATDG is currently negotiating with the government of Ukraine and with the O. Antonov Aviation Sciences and Technology Complex in Kiev, Ukraine with regard to the full development and world-wide commercialization of ATDG's Advanced Saucer Aerospacecraft, etc.. ATDG envisions that the saucers will become commercially available as we enter the new Millennium.
