UN PRESS CONFERENCE ON CONCERNS THAT THE 1967 OUTER SPACE TREATY IS BEING
WEAKENED BY GOVERNMENTS' PLANS TO MILITARIZE AND NUCLEARIZE OUTER SPACE

FOR IMMEDIATE RELEASE:

NEW YORK CITY - You are invited to attend a Press Conference at the United Nations from 11:00 A.M. to noon Wednesday, June 24, 1998. This Conference is to help alert the public to Government actions that violate the 1967 Outer Space Treaty. The U.S. Space Command has stated that it is going to militarily dominate outer space although the U.S. Government had signed the Outer Space Treaty.

The Press Conference is being held on June 24 to publicize the June 24, 1999 scheduled Cassini space probe's swingby of Venus to accelerate toward Earth. NASA and the European Space Agency launched Cassini on October 15, 1997 with a record load of plutonium on board, amid protest from concerned scientists, public officials and thousands of individuals and groups. The Cassini Earth flyby is scheduled for a record-speed Earth flyby on August 18, 1999. According to NASA's Environmental Impact Statement, "...approximately 5 billion of the estimated 7 to 8 billion world population at the time of the swingbys could receive 99 percent or more of the radiation exposure," in the event of an accident during the Cassini flyby.

Hundreds of organizations and individuals have endorsed the attached Statement for this Press Conference, which "...support the objectives of abolishing technologies and weapons that threaten the mass destruction of life." Most signers have also endorsed the Abolition 2000 Statement, calling for International Negotiations in the year 2000 to abolish nuclear weapons. A rally is scheduled after the UN Press Conference at the Isaiah Wall, UN Plaza at 42nd Street from 12:00 to 2:00 P.M.

Speakers of the UN Noflyby Press Conference include Karl Grossman,

Michio Kaku and Ernest Sternglass. Karl Grossman is an award-winning video documentary producer and author of the WRONG STUFF: The Space Program's Nuclear Threat to Life. Michio Kaku is a Professor of Theoretical Physics, City University of New York, Co-author of "To Win a Nuclear War," a leading authority on Einstein's Unified Field Theory and is the co-founder of string field theory. Ernest Sternglass is Emeritus Professor of Radiological Physics in the Department of Radiology, University of Pittsburgh School of Medicine. Tina Bell of Women's International League of Peace and Freedom (NY Metro) and Organizer of NY NGO's working for a peaceful space will moderate the Conference.
